STANDARD ENVIRONMENTAL RECORDS

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities,

private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/27/2025 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 1 mile of the target property.

PRELIMINARY EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.625 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.625 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 32 RGA LUST sites within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The FINDS: database may contain additional details for this site.

Eval Notes: Reviewed past reports to resolve D008 oily water with lead issue. Oily water waste is not a RCRA hazardous waste. The lead concentration is below regulatory threshold. Facility is currently disposing of oily water as a a California waste (222). Advised facility to stop labeling the oily water as a RCRA D008 waste stream to avoid additional confusion in waste determination in the future. Also advised facility to keep old test records and have it available for review.

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for routine hazardous waste inspection. Consent to enter and inspect was given by Joe Zumwalt. Observed the facility and inspected hazardous waste storage. The tanks and containers are stored closed and properly labeled. No evidence of hazardous waste spillage or runoff was observed. Manifests are not available for review. Please be aware that waste oil filters that are made from metal are subject to reduced hazardous waste handling requirements in order to encourage metal recycling. Filters and/or cartridges that are not made from metal do not benefit from these reduced standards and are fully regulated according to hazardous waste laws and regulations. For more information regarding used oil filter handling, please visit the following website: http://www.dtsc.ca.gov/InformationResources/upload/RAG_Used-Oil-Filters_Generators1.pdf

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

The FINDS: database may contain additional details for this site.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Description:	Reporting Party states a building fire destroyed around 30 storage tanks. A small portion of the released substances went into a storm drain. It is unconfirmed at this time where the storm drain leads too, but is in the vicinity of the Santa Ana River. Containment measures have been deployed to keep any additional substances from going into the storm drain. A contractor has been hired to provide clean-up. The fire occurred when no employees were in the building. The fire was put out at 2100 hours on 03/26/2023.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and

ANODYNE INC (Continued) **1000194965**

reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
THE SUPERFUND ENTERPRISE MANAGEMENT SYSTEM (SEMS) INTEGRATES MULTIPLE LEGACY SYSTEMS INTO A COMPREHENSIVE TRACKING AND REPORTING TOOL, PROVIDING DATA ON THE INVENTORY OF ACTIVE AND ARCHIVED HAZARDOUS WASTE SITES EVALUATED BY THE SUPERFUND PROGRAM. IT CONTAINS SITES THAT ARE EITHER PROPOSED TO BE OR ARE ON THE NATIONAL PRIORITIES LIST (NPL) AS WELL AS SITES THAT ARE IN THE SCREENING AND ASSESSMENT PHASE FOR POSSIBLE INCLUSION ON THE NPL.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
CEDRI is a web application used by EPA programs and various stakeholders to manage environmental data transmitted to EPA in order to meet EPA's reporting requirements.

Observed the facility and inspected hazardous materials storage. The Inventory submitted in CERS closely matches what is observed on site. Please correct the amount of Propane listed in CERS. The Max Daily should be 42 gallons, not 20 cubic feet. Violation was corrected on site. Please remove the following from the CERS submission as they are not on site in reportable quantities: - Tin Lead - Matte Tin - AC 818 The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds (200cuft compressed gas, 55 gal liquid, 500 lbs solid). If there is a change in the type or amount of chemicals that are maintained on site, please electronically submit revised documents within 30 days of the change.

Eval Notes: Please be advised that this Agency has reviewed the Tiered Permitting Financial Assurance Self Certification for this facility. The 2014 Closure Cost Estimate (CCE) at $7,285.35 was not properly calculated. The 2014 CCE should be, at a minimum, your 2013 CCE multiplied by an inflation factor of 1.014. Your 2013 CCE was submitted and approved at $7,322.56 ($5,822.56 with applying salvage value of $1,500.00). Therefore, your minimum 2014 amount must be $7,322.56 x 1.014 = $7,425.08 - salvage value. In addition, the salvage value of the assets has not been changed from the value reported in 2010. The salvage value of your assets must be reviewed on an annual basis to be sure that depreciation and changes made to your inventory of equipment are reflected in the salvage value estimate. If you believe that your salvage value has remained the same since 2010, be sure to maintain documentation reflecting your estimated salvage value. Corrected Certification Of Financial [Truncated]

Eval Notes: Weather: hot and sunny. SWPPP is dated August 2011; is not certified. There is a separate plastering business using a portion of building 2240 and the south parking area; this is not shown in the SWPPP. Contacts report that inlets in the central wastewater treatment area harvest rainwater and direct it into their treatment system so that it does not discharge; this process is also not shown in the SWPPP. Found that a berm at the downstream end of the wastewater treatment area has a pipe through it that is open which would allow a discharge from this area; pointed this out to Contacts. North yard is only area that is sampled. South yard includes the plastering business but Anodyne stores machinery in this area as well; explained that if these industrial activities are moved to central yard (wastewater treatment area) and this area is fixed so it does not discharge, then no additional areas need to be sampled. If not, then central and south yards will need to be sampled. Contacts reported that they wash vehicles in north yard; they were advised that this would result in unauthorized non-storm water discharges. Contacts agreed to e-mail recent storm water sample results.

Consent to enter and inspect was given by Debbie Cobb. The facility has changed treatment operations such that process tank solutions with heavy metals are now recycled using anion/cation columns. The reclaimed water is returned to the process line. The facility uses the two batch treatment units for alkaline and acid rinse waters. Rinses are treated in the general treatment system. Cyanide rinses with cadmium were previously hauled as hazardous waste. The facility is currently collecting these rinses in a holding tank and then transferring them to an evaporation unit. Your notification violation remains outstanding. In order to correct the violation, you are now required to submit your tiered permitting documents electronically via the CERS database. The California Electronic Reporting System (CERS) is located at http://cers.calepa.ca.gov/. The eSubmit portal does not currently have the capability for tiered permitting packages, so you are not able to use that database for PBR reporting. I believe the reporting format in CERS will make it easier to report the required information in a consistent manner and avoid the problems you are currently having. As a reminder, the financial assurance documents must also be submitted to CERS, and they are due by 3/1/16 (tomorrow).

Eval Notes: Anodyne/Cobb requested an update on the outstanding CAL ARP violations. Below are the areas that still need to be corrected in order to abate the violations: 1) Tank # P-20 (394 gallon tank) contains cadmium oxide and sodium cyanide. As of the last inspection, this tank contained 492 lbs of sodium cyanide and 106 lbs of cadmium oxide. Both of these chemicals are regulated under CAL ARP if they exceed 100 lbs. The Risk Management Plan (RMP) had an off site consequence analysis (OCA) completed for the sodium cyanide. However, no OCA was conducted for the cadmium oxide. Anodyne needs to either 1) conduct an OCA for the cadmium oxide in P-20 or reduce the cadmium oxide level to less than 100 lbs. (this can be done by reducing the concentration or the volume of tank P-20 to contain less than 100 lbs.). 2) The RMP needed the following corrections: Section 1.7: The RMP listed an ex-employee as the CAL ARP coordinator. Eval Notes: Onsite this date to conduct a routine CalARP inspection. Permission to inspect was given by Roger Leon. This facility is a CalARP Program Level 1 facility. CalARP chemicals over reporting threshold quantities include: Sodium Cyanide and Potassium Cyanide The reporting threshold for accident release prevention for powdered Sodium and Potassium Cyanides is 100 pounds for each. This date, I observed Sodium and Potassium Cyanide stored in separate 220 pound drums. This raw material storage process is not included in the Risk Management Plan (RMP) that I reviewed. You will need to add this covered process to the RMP and perform an offsite consequence analysis. See violation below. You may also choose to reduce the volume of these two chemicals so you are storing each below 100 pounds or choose to store these chemicals in a larger physical state (pellets/flakes). Dun and Bradstreet number added to the RMP this date. Worst case scenario last updated in [Truncated]

Eval Notes: On-site for a CalARP routine inspection. Met with EHS Manager Roger Leon of Anodyne. Also present was Brandon Aprahamian of OCHCA. Consent was provided to enter and conduct CalARP inspection activities. This facility is regulated under CalARP Program Level 1 requirements for Sodium Cyanide. The facility has two process tanks (P-19 & P-20) that exceed the threshold quantity (TQ) for sodium cyanide. The total quantity of sodium cyanide in the p-19 and P-20 are 185 pounds and 382 pounds, respectively. The following observations were made on this date: 1. CalARP Registration: The registration was included in the RMP. 2. The program level 1 RMP was certified on 3/1/2018. The certification in the revised RMP did not contain the correct certification statement for a level 1 RMP. Please correct this violation by sending the proper certification to this agency. 3. Eval Notes: Received information from Roger Leon regarding the particle size for the Sodium and Potassium Cyanides granules. Per Mr. Leon, the chemical supplier, Phibro Chem states that the particle size is 0.2 millimeters or 200 microns. This particle size is more than 100 micron, therefore, your current materials storage is below the reporting threshold of 10,000 pounds. You do not need to revise your RMP for the Sodium and Potassium cyanide material storage. Violation abated.

However: 1) Several of the "mixture" chemicals still did not list the percentages (%). 2) The potassium cyanide single largest container is actually 110 lbs, not 1 lbs as reported. 3) The potassium cyanide, sodium cyanide and cadmium oxide are EHSs and need to have the EHS box checked. 4) The propane needs to have the maximum daily amount as 5 lbs x the # of propane containers (3-4 at the time of inspection). BEP and map are OK. Please make these corrections and re submit.

Eval Notes: Weather: hot and sunny. SWPPP is dated August 2011; is not certified. There is a separate plastering business using a portion of building 2240 and the south parking area; this is not shown in the SWPPP. Contacts report that inlets in the central wastewater treatment area harvest rainwater and direct it into their treatment system so that it does not discharge; this process is also not shown in the SWPPP. Found that a berm at the downstream end of the wastewater treatment area has a pipe through it that is open which would allow a discharge from this area; pointed this out to Contacts. North yard is only area that is sampled. South yard includes the plastering business but Anodyne stores machinery in this area as well; explained that if these industrial activities are moved to central yard (wastewater treatment area) and this area is fixed so it does not discharge, then no additional areas need to be sampled. If not, then central and south yards will need to be sampled. Contacts reported that they wash vehicles in north yard; they were advised that this would result in unauthorized non-storm water discharges. Contacts agreed to e-mail recent storm water sample results.

Your notification violation remains outstanding. In order to correct the violation, you are now required to submit your tiered permitting documents electronically via the CERS database. The California Electronic Reporting System (CERS) is located at http://cers.calepa.ca.gov/. The eSubmit portal does not currently have the capability for tiered permitting packages, so you are not able to use that database for PBR reporting. I believe the reporting format in CERS will make it easier to report the required information in a consistent manner and avoid the problems you are currently having. As a reminder, the financial assurance documents must also be submitted to CERS, and they are due by 3/1/16 (tomorrow).

Eval Notes: Anodyne/Cobb requested an update on the outstanding CAL ARP violations. Below are the areas that still need to be corrected in order to abate the violations: 1) Tank # P-20 (394 gallon tank) contains cadmium oxide and sodium cyanide. As of the last inspection, this tank contained 492 lbs of sodium cyanide and 106 lbs of cadmium oxide. Both of these chemicals are regulated under CAL ARP if they exceed 100 lbs. The Risk Management Plan (RMP) had an off site consequence analysis (OCA) completed for the sodium cyanide. However, no OCA was conducted for the cadmium oxide. Anodyne needs to either 1) conduct an OCA for the cadmium oxide in P-20 or reduce the cadmium oxide level to less than 100 lbs. (this can be done by reducing the concentration or the volume of tank P-20 to contain less than 100 lbs.). 2) The RMP needed the following corrections: Section 1.7: The RMP listed an ex-employee as the CAL ARP coordinator. The new CAL ARP coordinator/E-mail needs t be [Truncated]

CalARP chemicals over reporting threshold quantities include: Sodium Cyanide and Potassium Cyanide The reporting threshold for accident release prevention for powdered Sodium and Potassium Cyanides is 100 pounds for each. This date, I observed Sodium and Potassium Cyanide stored in separate 220 pound drums. This raw material storage process is not included in the Risk Management Plan (RMP) that I reviewed. You will need to add this covered process to the RMP and perform an offsite consequence analysis. See violation below. You may also choose to reduce the volume of these two chemicals so you are storing each below 100 pounds or choose to store these chemicals in a larger physical state (pellets/flakes). Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
