The Executive Administrator Angelica Sanchez sent a letter to Adria Paesani of the City of Fountain Valley Fire Department requesting assistance and coordination of Emergency Response training. This is proof of compliance regarding violation PO03 (No attempt to coordinate the local emergency planning and response with the Fountain Valley Fire Department has been made this year. Ensure that response actions have been coordinated with the Fountain Valley Fire Department and forward a copy of the request letter to this agency immediately.) Therefore violation PO03 is abated today. Thank you

Eval Notes: Inspector Comments: Please be advised that this Agency has reviewed the 2016 Tiered Permitting Financial Assurance Self Certification for this facility. The 2016 Closure Cost Estimate (CCE) of $9,624.83 is not properly calculated. The 2016 CCE should be, at a minimum, your 2015 CCE multiplied by an inflation factor of 1.009. Your 2015 CCE was submitted and approved at $7,809.00. Therefore, your minimum 2016 amount must be $7,809.00 x 1.009 = $7,879.28. The adjusted/estimated closure cost is $7,879.28 - $17,508.00 (salvage value) = $-9,628.72. Corrected Certification Of Financial Assurance Form and Estimated Closure Cost form must be submitted before 3/4/16.

Eval Notes: Please be advised that this Agency has received and reviewed Tiered Permitting Financial Assurance Self Certification for this facility.
The 2014 Closure Cost Estimate (CCE) was not properly calculated. According to the Estimated Closure Cost form provided, the inflation factor was applied to the salvage value as well as the total closure costs. You cannot apply the inflation factor to the salvage value. The inflation factor must be applied to total cost closure and then the salvage value can be deducted. Therefore, the adjusted closure cost for this facility is -$9,721.98 ($7,686.02 - $17,408.00). Revised Certification Of Financial Assurance Form and Estimated Closure Cost form (enclosed) must be submitted to this Agency before 3/27/14.

The 2015 Adjusted Closure Cost Estimate (CCE) was not properly calculated since 2015 inflation factor (.016) was applied to 2013 costs. The 2014 CCE was approved at $7,686.02. Therefore, the 2015 CCE is $7,686.02 x 1.016 (inflation factor) = $7,809.00. The adjusted CCE for 2015 for this facility is $7,809.00 - salvage value. Eval Notes: Site has 4 buildings; one is administrative only and was not inspected. SW samples taken Feb 2010 show exceedances of Zn and N+N,N at all three buildings; Al and specific conductance at Building 1 only. No issues observed at Building 4. Building 2's yard is littered, including with cotton swabs, indicating that employees are just littering and the debris is not just incidental. Building one has a small leak along its foundation near pipes labeled "industrial water". Contact asserts that the industrial water is city-supplied potable water and leak is coming from a water fountain situated inside the building. Blasting and plating occur at Building 1. Yard in front of blasting room is coated in blasting sand and the concrete is heavily damaged from moving heavy parts; this makes it difficult to sweep thoroughly. Contact states sands are swept 2-3 times/week. On roof of Building 1 found pools and salt rings in and in front of a vent from interior plating operation and a small leak of chiller water from a damaged fitting on the chiller. Contact explained the pools/salts are from condensing of vapor from heated plating solutions inside the vent housing. Solutions include nitric acid which may relate to the benchmark exceedances for N+N,N (3.39 mg/L) and specific conductance (368mmhos/cm).

Hazardous characteristics of the wastes: This information can be found on the main report. Go to Page 2, under the heading "Material Storage". The first item says "Material Characteristics: Heavy Metal Wastes from Metal Rinse Tanks". This information can be found for each tank on subsequent pages. "Hazardous characteristic is one or more of the following: toxic, corrosive, ignitable, and/or reactive. A description of the waste is not sufficient unless it includes the hazardous characteristic." 2. Engineering calculations for the tanks are described on Page 4 of the Seismic attachment. Individual tank calculations are available on the corresponding pages. For example, Tank WW-1 can be found on Page 11 of the seismic report. Eval Notes: Inspector Comments: Please be advised that this Agency has reviewed the 2016 Tiered Permitting Financial Assurance Self Certification for this facility. The 2016 Closure Cost Estimate (CCE) of $9,624.83 is not properly calculated. The 2016 CCE should be, at a minimum, your 2015 CCE multiplied by an inflation factor of 1.009. Your 2015 CCE was submitted and approved at $7,809.00. Therefore, your minimum 2016 amount must be $7,809.00 x 1.009 = $7,879.28. The adjusted/estimated closure cost is $7,879.28 - $17,508.00 (salvage value) = $-9,628.72. Eval Notes: Please be advised that this Agency has received and reviewed Tiered Permitting Financial Assurance Self Certification for this facility. The 2014 Closure Cost Estimate (CCE) was not properly calculated. According to the Estimated Closure Cost form provided, the inflation factor was applied to the salvage value as well as the total closure costs. You cannot apply the inflation factor to the salvage value. The inflation factor must be applied to total cost closure and then the salvage value can be deducted. Therefore, the adjusted closure cost for this facility is -$9,721.98 ($7,686.02 - $17,408.00). Revised Certification Of Financial Assurance Form and Estimated Closure Cost form (enclosed) must be submitted to this Agency before 3/27/14.

The 2015 Adjusted Closure Cost Estimate (CCE) was not properly calculated since 2015 inflation factor (.016) was applied to 2013 costs. The 2014 CCE was approved at $7,686.02. Therefore, the 2015 CCE is $7,686.02 x 1.016 (inflation factor) = $7,809.00. The adjusted CCE for 2015 for this facility is $7,809.00 - salvage value. Eval Notes: On site for routine Permit By Rule inspection. Also present was Lisa Wales of OCHCA. The inspection was conducted with Ramiro Salazar and Angelica Sanchez. Consent to enter, inspect, and take photographs was given by Mr. Salazar. The facility conducts treatment of rinses with aqueous waste with metals, acids, and cyanide under Permit by Rule regulation. There are three treatment units. The facility also conducts recycling activities for acid recycling, electroless nickel rinse waters, cadmium rinse waters, and chromate rinse waters. Mr. Salazar confirmed that there have been no changes to the system and no releases in the previous three years. The tank systems are labeled with the required facility information. Holding racks were initially not installed between the cyanide process and rinse tanks. They were installed during the inspection. The cyanide process uses single rinse tanks, therefore countercurrent rinsing is not required. Annual training for employees who [Truncated]

Eval Notes: On site for routine recycling inspection. Also present was Lisa Wales of OCHCA. The inspection was conducted with Ramiro Salazar and Angelica Sanchez. Consent to enter, inspect, and take photographs was given by Mr. Salazar. The facility has four recycling processes: - Acid purification unit: there are four anodize (sulfuric acid) baths that are run consecutively processed through a resin filter to remove aluminum and other impurities. The acid is returned to the process tank. The resin beads are periodically regenerated manually, with the rinsate being sent to the wastewater treatment system (PBR) - Electroless nickel rinse water recycling: liquid from nickel rinse tanks is processed in electrocell columns to remove nickel. The water is returned to the rinse tanks. - Cadmium rinse water recycling: rinse waters with cadmium are processed through four charcoal filter columns. The water is returned to the process. small leak along its foundation near pipes labeled "industrial water". Contact asserts that the industrial water is city-supplied potable water and leak is coming from a water fountain situated inside the building. Blasting and plating occur at Building 1. Yard in front of blasting room is coated in blasting sand and the concrete is heavily damaged from moving heavy parts; this makes it difficult to sweep thoroughly. Contact states sands are swept 2-3 times/week. On roof of Building 1 found pools and salt rings in and in front of a vent from interior plating operation and a small leak of chiller water from a damaged fitting on the chiller. Contact explained the pools/salts are from condensing of vapor from heated plating solutions inside the vent housing. Solutions include nitric acid which may relate to the benchmark exceedances for N+N,N (3.39 mg/L) and specific conductance (368mmhos/cm).

Hazardous characteristics of the wastes: This information can be found on the main report. Go to Page 2, under the heading "Material Storage". The first item says "Material Characteristics: Heavy Metal Wastes from Metal Rinse Tanks". This information can be found for each tank on subsequent pages. "Hazardous characteristic is one or more of the following: toxic, corrosive, ignitable, and/or reactive. A description of the waste is not sufficient unless it includes the hazardous characteristic." 2. Engineering calculations for the tanks are described on Page 4 of the Seismic attachment. Individual tank calculations are available on the corresponding pages. For example, Tank WW-1 can be found on Page 11 of the seismic report. Site History:	Omni was established in 1980 and now comprises a six-facility campus with over 65,000 square feet of manufacturing and production. The company is a leading international supplier of engineered metal finishing to aerospace, defense, space, armament, electronic and industrial markets. On April 20,2022, Omni sustained a structure fire at the Site. The runoff ran south down the driveway adjacent to Building 1 and entered the northern street gutter along Coley River Circle, where it flowed unrestricted to the west until it entered a storm drain at the intersection of Coley River Circle and Newhope Street. From here, the firefighting runoff travelled through the underground storm drains until being discharged from Outfall D05 into the Fountain Valley Channel. The Site is currently in the assessment phase.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Site History:	The site consists of two properties 3001 S. Yale Street and 3400 Garry Street. The 70,000 square foot building at 3001 S. Yale Street, Santa Ana (Site) was constructed in 1974. From 1979 to 2002 Panel Concepts leased and operated on the property. The company manufactured, assembled, and distributed open office panels and modular furniture components for commercial uses. Process wastewater was collected and treated in a three-stage clarifier and discharged to the sanitary sewer. Geology The soils consist of an upper sand layer of medium well sorted sand, which ranges from 15 feet thick near the eastern border of the South Yale parcel to 30 feet thick at the southwestern corner of the Garry Street parcel. Below the sand layer is clay. Depth to first water is approximately 7 feet bgs. Groundwater flows to the south Investigation of soil and groundwater at 3001 S. Yale Street was initiated in 2002. Volatile organic compounds (VOCs) tetrachloroethylene (PCE), trichloroethylene (TCE), cis-1,2-dichloroethene (cis-12DCE), trans-1,2-dichloroethene (trans-12DCE), vinyl chloride, 1,1-dichoroethane, and 1,2-dichoroethane were found in the soil vapor, soil matrix and groundwater samples collected, during investigations performed between 2002 and 2004. The primary constituent found in all media sampled was PCE. The highest concentrations of PCE detected in the soil gas samples (1500 g/L) and groundwater samples (1,900 g/L) were collected from under the 3001 S. Yale Street building on the eastern side. Nine groundwater monitoring wells were installed in November 2006 and four more groundwater monitoring wells were installed in January 2007. The highest concentrations of PCE (280 g/L) and TCE (130 g/L) were detected in water samples from groundwater monitoring wells MW-1 located between the two buildings. The highest concentrations of cis-12DCE (2600 g/L) and trans-12DCE (180 g/L) were found in groundwater monitoring well MW-16 located on the north side of the 3400 Garry Street building. In 2008 a groundwater recirculation and treatment system was installed and sodium lactate and amendments were periodically added to the reinjected groundwater. Extracted groundwater was passed through an air-stripper before being reinjected. In June 2008 a percolation trench was installed to take overflow from the reinjection wells. The air-stripped was replaced with carbon filters in 2009.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System

JACUZZI WHIRLPOOL BATH (Continued) **1000429047**

(RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site. Please contact your EDR Account Executive for more information
