Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: On site for a routine hazardous waste inspection. Consent to enter and inspect was granted by Russel Blayney, Operations Manager. The facility is small quantity generator of pathology and slide staining waste. Walked throughout the laboratory and the final storage area in the next office. The following waste streams were observed: - Formaldehyde solution - Propylene glycol water - Flammable liquid (alcohol/IPA) - Flammable liquid methanol water - Silver Nitrate - Chromic Acid Containers were stored closed but not properly labeled. Flammable liquid (methanol) containers in the storage area and one-gallon silver nitrate container under the lab sink were missing accumulation dates. A one-gallon container of waste chromic acid under the sink was missing a hazardous waste label. Staff added accumulation dates to labels and a hazardous water label was added to the waste chromic acid container during the inspection. Employee training documentation and manifests were available for review

The facility has four double-walled tanks monitored by a Veeder Root TLS350 system. The monitor is operational for audible and visual alarms. Panel display reads all functions normal. Positive shutdown and fail-safe programming were verified. Software version 332 is installed. In-tank probes are used for overfill prevention. The sensors in the fuel tank annulars for the 87 AUX/91/Diesel, turbine sumps, fill sumps, and UDCs all shutdown the turbines when submerged in fuel. The 87M tank annular sensor failed testing. The leak electronic detectors were tested with a simulated 3 gph leak and were determined to be operational. The in-tank probes were tested after inspector departure. Met with Yosuke Koga nd David Lopez. Discussed the following: 1) The HMBP has not been completed through the E Submit Portal. Mr. Lopez is going to attend the OCHCA Electronic Reporting Lab on 10/08 and 10/22 to complete this reporting for Fountain Valley. Discussed the hazardous materials on-site and what needs to be disclosed. 2) The facility does not appear to generate hazardous waste. The waste generated in January of 2014 was a result of the testing of the water filtration plant. Waste water and waste milk are generated but are disposed of via the sanitary sewer under a permit from OCSD. 3) The facility does use ammonia to chill the water used in production. The charge of the ammonia is 476 pounds according to the operations manual and the chilling unit (sign-see photo attached). The [Truncated]

Eval Notes: On site for an initial hazardous waste inspection. Consent to enter and inspect was given by Franco Cuevas, Production Supervisor. This facility is small quantity generator of waste oil from the repair of bottle making, filling and packaging machines. Walked throughout the facility. Observed hazardous waste storage area in the back of the plant. The following hazardous waste was observed: -6 x 55-gallon drums of waste oil Containers were stored closed but not properly labeled. Discussed the need for "used oil labels" with dates for accumulation start dates. The facility is currently disposing of oil every three months. Emergency plan and consolidated manifests were available and reviewed. Employees are reported to be trained. No hazardous waste or universal waste observed in the dumpster/enclosure area. No hazardous waste violations were observed on this date. A copy of this report will be sent to franco.cuevas@yakultusa.com.

Eval Notes: INSPECTOR COMMENTS: On-site for a hazardous waste audit and to determine the generator status of the facility. Met with Suzanne Meza and discussed elements of the hazardous waste, hazardous materials and CalARP inspection programs. The Production Manager Mr Kaga, is at an off-site meeting and is not available. The following items need to be completed or addressed: 1) The facility must obtain a permanent EPA ID number for the generation of hazardous waste. If more than 220 pounds of a federal or RCRA waste is going to be generated then a Federal EPA ID number must be obtained using the 8700-12 form. If the volume of RCRA waste is under 220 pounds per month, then a California EPA ID number can be obtained using DTSC form 1358. 2) The facility must submit a Hazardous Materials Business Plan (HMBP) immediately. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code [Truncated]

Eval Notes: Received inquiry regarding the waste analysis plan from Young Luu. Sent email response below: The complete waste analysis plan will also help determine if the ion exchange unit should be regulated under PBR. If the dilute copper solution entering the unit is non-hazardous, then it would not be considered treatment of hazardous waste. As I discussed with Reynaldo and Brian on Friday, if the unit is used only to meet sanitation discharge requirements and the wastes (every one of them) entering the unit are not hazardous, then regulation under PBR is not appropriate. Please be aware that testing should be conducted at the point of generation of each solution that is to be treated, and not after the solutions have been mixed together.

The closure cost estimate is the actual cost of closure. The actual closure cost for 2014 listed on the breakdown of costs is $225,319.00, rather than $225,318.91, since it was rounded off to the nearest dollar. The calculated amount should be recorded to the nearest penny and not rounded to the nearest dollar. In addition, the salvage value of the assets has not been changed from the value reported in 2012. The salvage value of your assets must be reviewed on an annual basis to be sure that depreciation and changes made to your inventory of equipment are reflected in the salvage value estimate. If you believe that your salvage value has remained the same since 2012, be sure to maintain documentation reflecting your estimated salvage value. Site History:	Based on the available data from previous investigations at the JMA Trust Property, located at 3320 South Yale Street in Santa Ana (Site), volatile organic compounds (VOCs) have impacted soil and groundwater beneath the Site. The Site was used by Verco Industries for manufacturing military practice bombs and bomb casings between 1975 and 1980, and by Anaheim Foundry for machining of cast iron parts between 1982 and 1984. Since 1984, Dana Corporation and Garrison Industries have manufactured hydraulic cylinders for motor vehicles at the Site. Phase II Environmental Site Assessments

JMA TRUST (Continued) **S106486910**

conducted at the Site between 1996 and 1998 identified trichloroethene (TCE) and tetrachloroethene (PCE) contamination in soil, soil vapor, and groundwater. Based on the historical groundwater monitoring data from the Site, the maximum TCE and PCE concentrations detected were 110 micrograms per liter (g/L) and 34 g/L, respectively, with daughter product cis-1,2-dichloroethylene (DCE) ranging from 6.6 to 952 g/L. In compliance with Section 13365 of the California Water Code, this letter is being sent to provide you with the following information regarding costs for regulatory oversight work. The Site overlies the Orange County Groundwater Management Zone, as defined in the Regional Water Board s Water Quality Control Plan (Basin Plan). As specified in the Basin Plan, the beneficial uses of the groundwater within the Orange County Groundwater Management Zone include Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, and Industrial Process Supply. The Site also overlies the Orange County South Basin regional groundwater plume, which is impacted with VOCs and other contaminants. The available information indicates that historical discharges of waste at the Site may have impacted one or more of the beneficial uses of the Orange County Groundwater Management Zone. Therefore, additional investigation is necessary to assess the potential impacts to beneficial uses. The site entered the cost recovery program on March 2019 and the investigation at the Site is ongoing.

Environmental Interest/Information System:
All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site. Please contact your EDR Account Executive for more information

Quarterly Update:	This facility was used for manufacture of sporting goods for 20 years. This facility was clean closed by DTSC back in 6/5/85. For corrective action a VOC removal from GW system was installed in 1985. This was conducted under WB's NPDES permit no. 9000041. It looks as DTSC was not involved in corrective action for this site.
