Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/27/2025 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 1 mile of the target property.

The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 6 EDR Hist Cleaner sites within approximately 0.625 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 14 RGA LUST sites within approximately 0.5 miles of the target property.

Summary Details:

Conditions at listing December 1982): The McColl Site is an inactive waste disposal facility covering 8 acres in Fullerton, Orange County, California. The site consists of two distinct areas: 1) the Ramparts, which is in the eastern portion of the site and is surrounded by developed property and residences and 2) the Los Coyotes Area, which is in the western portion and underlies a part of the Los Coyotes Country Club Golf Course. About 200,000 cubic yards of wastes, primarily oil refinery acid sludge and oil field drilling muds, are on-site. The sludge was placed in sumps and covered with drilling muds and other fill materials. The major portion of wastes is acidic and contains sulfur and hydrocarbons. The wastes have reacted to produce a mixture of complex organic and sulfur-containing compounds, some of which are gases. The odors from some of the gases are easily detected by nearby residents. There is a potential for direct contact with the wastes and for contamination of surface water and ground water. In October 1981, EPA, the State, and potentially responsible parties agreed on a three-phase cleanup plan: Phase I, a complete site investigation; Phase II, a development and evaluation of remedial alternatives; and Phase III, cleanup of the site. Phases I and II have been completed, and excavation of the site has been determined to be the most cost-effective remedy. Status July 1983): Phase III is scheduled to begin in October 1983. The State and EPA are entering into negotiations with potentially responsible parties to compel them to pay for or participate in the remedial action. If negotiations are not successful or timely, the State plans to apply for Federal funding and enter into a Cooperative Agreement with EPA.

Comments: The O & M phase began in November 1997 with completion of construction of the RCRA equivalent cap and slurry wall containment system and infiltration controls that comprised the CERCLA remedy. An O and M agreement between U.S. EPA and the oil companies who were identified as Responsible Parties for the McColl site was developed at this time. It has been updated periodically as conditions at the site have changed, requiring fine tuning of the O & M regime.

ROSECRANS & SUNNY RIDGE
FULLERTON, CA 92633
(RCRA) - equivalent cap and slurry wall containment system as a contingency remedy in the case that solidification of the wastes in place was not found to be feasible. In September 1995, U.S. EPA made the determination that solidification was not technically feasible and made the decision to move forward with the contingency remedy. U.S. EPA subsequently issued the Record of Decision (ROD) for the Source Operable Unit (Source OU) specifying implementation of the RCRA equivalent cap and slurry wall containment system in June 1993.

During this period, U.S. EPA identified several major oil oil companies (Shell Oil, Union Oil (UNOCAL), Texaco Inc., Atlantic Richfield Company (ARCO) and Phillips Petroleum as Potentially Responsible Parties (PRPs) for the McColl Site. These oil companies subsequently formed a consortium known as the McColl Site Group (MSG) for the purposes of investigation and remediating the site. The property owner, McAuley LCX Corporation, was also named as a PRP for the McColl Site.

From September 1993 through April 1996, the McColl Site conducted a further remedial investigation at the site in preparation for construction of the cap and slurry wall containment system. Field activities related to the construction of the remedial measures outlined in the Source OU and Groundwater OU RODs were initiated in June 1996. Onsite construction of the remedy began on March 31, 1977 and was completed in November 1997. The former sump area has been incorporated into the Los Coyotes golf course, a land use that is highly beneficial to the community.

Under CERCLA, U.S. EPA is required to perform a Five-Year Review at each superfund site to determine whether or not the remedy continues to be adequately protective of human health and the environment. U.S. EPA issued the first five-year Review Report for the McColl site on September 30,2002. The Five-Year Report identified several issues relation to operation and maintenance (O & M) which will be reviewed by a committee of stakeholders and implemented prior to the next five-year review. In the mean time, U.S. EPA has initiated measures to de-list the McColl Site from the National Priority List (NPL).

The 22-acre McColl Hazardous Waste Site was an inactive waste disposal facility located in the northwest section of the City of Fullerton, Orange County, California.

Housing developments border the site to the northeast, east, and to the south. The Los Coyotes golf course is located to the south of the former McColl Site and there is a regional park on the west border of the site. An operating oil field occupies the open area north of the site.

From 1942 through 1946 approximately 72,600 cubic yards of petroleum waste sludge was deposited in twelve sump waste sumps. These sumps were grouped into two areas of the site, identified as the Ramparts area and the Los Coyotes area. During the late 1950's and early 1960's, three sumps in the Ramparts area were covered with bentonite based drilling muds in an attempt to control odors coming from the site. In the late 1950's six of the sumps at the lower end of the property were covered with natural fill materials resulting from construction of the Los Coyotes golf course adjacent to the McColl site. Use of the site as an active disposal area concluded in 1964.

The waste materials at the McColl Site became a source of malodorous air emissions of sulfur dioxide (SO₂), tetrahydrothiophenes (THTs), benzene, and other hydrocarbons. Inorganic contaminants such as arsenic, lead, nickel, aluminum, beryllium, cadmium, manganese, thallium, selenium, and chromium were found in the groundwater at concentrations near the Maximum Contaminant Levels (MCLs). Organic compounds such as benzene, 1,2-dichloroethane, methylene chloride, and bis (2-ethylhexyl) phthalate were also found in the groundwater.

The history of investigation at the site began in 1980 when DTSC and U.S. EPA began a joint investigation of the site. In 1982 the McColl Site was placed on the federal National Priority List (NPL), which made the cleanup activities eligible for funding under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). During the period from 1984 through 1996, several cleanup plans were proposed for the site. The original cleanup proposal articulated in 1984 was excavation and offsite disposal of the wastes under the jurisdiction of DTSC. However, a court injunction blocked DTSC from implementing this remedy. In 1989 U.S. EPA resumed the role of lead agency. In 1992, U.S. EPA updated the feasibility study and proposed solidification of the wastes in place as the preferred remedial alternative. The 1992 plan also identified installation of a Resource, Recovery and Conservation Act

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

This data is processed within the RCRA Information (RCRAInfo) database The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker,

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 01/03/2022. OBSERVATION: Facility currently utilizes ATG for overfill prevention. USTs with multiple ATGs that only can activate external alarms when the first UST overfill condition occurs do not meet overfill requirements. CORRECTIVE ACTION: Plan check SR0148468 received by this Agency. Ensure each UST has a functional overfill prevention independent of the other USTs at the facility (i.e., installing a separate alarm unit or other appropriate OPE equipment for each tank).
