compliance with the annual certification requirement and a violation
is being cited. Businesses are required to annually review and certify
that their information in the California Electronic Reporting System
(CERS) is complete, accurate and in compliance by March 1st. Your
business was notified via email on 5/4/23 that your facility was out
of compliance with this requirement. Please visit
<https://cers.calepa.ca.gov/> to access CERS and submit your completed
HMBP forms. Failure to submit HMBEP forms is a violation of the
California Health & Safety Code and California Code of Regulations.
Progressive enforcement will be taken by this Agency if a
submittal/certification has not been completed within 30 days of this
report. If you have any questions regarding this violation, please
contact your inspector, Alicia Sagal at (714) 980-0863 or

Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 05/25/2016. Minor Violation Corrected on Site: Failure to properly label hazardous waste accumulation containers. Observation: Observed 1 green x 55-gallon drum that did not have a hazardous waste label at the time of inspection. Per Vivian Rofail, this drum contains waste liquid oil. Observed 1 black x 55-gallon drum containing waste solids and 1 x blue 55-gallon drum containing waste liquid. The hazardous waste information label was faded/illegible for these drums. Corrective Action: Immediately label all hazardous waste containers with the following: Hazardous Waste , name and address of the generator, the contents of the container, physical and chemical characteristics of the hazardous waste, and the start date of accumulation. This was corrected on site by Vivian Rofail.

Violation Description: Failure to continuously monitor the interstitial space of the tank, piping and/or sumps sump such that the leak detection activates an audible/visual alarm when a leak is detected.
Violation Notes: Returned to compliance on 03/31/2016. While all sensors were properly located and properly functioning at the time of inspection, a review of the facility alarm history and maintenance records indicated a previous violation of monitoring requirements. On 9/15/15 at 0742 the 91 fill sump sensor went into "fuel alarm." At 0941, there was a "setup data warning" for this sensor indicating that it had been deleted and a second "setup data warning" at 1036 on 9/17/15. Maintenance records indicate that liquid was removed from this sump and the alarm cleared on 9/17/15. The facility failed to monitor the 91 fill sump from 0941 9/15/15 to 1036 9/17/15. This facility is owned by Faye Sedrak and currently has 4 employees. Per Vivian Rofail, hazardous waste storage areas are currently inspected weekly and employees are trained on handling hazardous waste. Hazardous waste manifests for the last three years were available for review during today's inspection. The emergency response plan information was available for review by the Veeder Root. No hazardous waste was observed in the dumpster at the time of inspection. Discussed proper management of universal waste (e.x. light bulbs, batteries).

Site History: In 1986, an underground clarifier was removed from the above-referenced site. Subsequent investigations indicated that the underlying soil and groundwater were impacted from discharges of volatile organic compounds. Beginning in 1991, a groundwater cleanup system was operating at the site to remediate groundwater affected by releases of trichloroethylene (TCE) from an underground clarifier. SVE operations at the Site included a former pilot-scale SVE system (former pilot-scale system) and a former full-scale SVE system (former full-scale system) near what is currently 2307 Moore Avenue. The former pilot-scale system operated from October 1991 to August 1992. The former full-scale system operated from January 1993 to November 1996. Vapor phase granular activated carbon was used to remove volatile organic compounds (VOCs) from the soil vapor extracted by both the former pilot-scale and former full-scale systems before discharging the treated vapor into the atmosphere. Approximately 7,500 pounds (lbs) of trichloroethylene (TCE), the primary VOC at the Site, was recovered by the former pilot-scale system. Approximately 3,500 lbs of TCE was recovered by the former full-scale system. The Regional Water Quality Control Board (RWQCB), Santa Ana Region, approved closure of the former full-scale system in February 1998. The closure was considered appropriate based on results of rebound testing conducted in January 1998 that indicated reduced concentrations of TCE in extracted soil vapor. The current groundwater treatment system consists of an advanced oxidation process (AOP) for treatment of 1,4-dioxane and volatile organic compounds followed by liquid phase granular activated carbon (LGAC). The AOP system began operation at the Site in February 2015. As of March 31, 2020, the cumulative volume of TCE removed from groundwater by the remediation system since system startup was approximately 117 gallons. The cumulative volume of groundwater treated by the remediation system is approximately 1,731 million gallons.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Violations Found: Yes
Eval Type: Routine done by local agency

Eval Notes: On site for a routine hazardous waste inspection. Consent to enter and inspect the facility was granted by Ubaldo Rivera, owner. This facility is owned by The Real Mechanic Shop, Inc. and currently has 3 employees. Per Ubaldo Rivera, hazardous waste storage areas are currently inspected daily and employees are trained on how to handle hazardous waste. Hazardous waste manifests for the last three years were available for review during today s inspection. The emergency response plan information sticker was provided. No hazardous waste was observed in the dumpster at the time of inspection. Discussed proper management of universal waste (e.x. light bulbs, batteries). A Certificate of Return to Compliance (CRC) is being issued. The minor violations on this report must be corrected within 30 days. Complete the CRC and return to this Agency within 30 days.

Eval Notes: On site for a routine hazardous waste inspection. Consent to enter and inspect the facility was granted by Dario Sandoval, owner. This facility is owned by Dario Sandoval and currently has 2 employees. Per Dario Sandoval, hazardous waste storage areas are currently inspected daily and employees are trained on how to handle hazardous waste. Hazardous waste manifests for the last three years were available for review during today's inspection. The emergency response plan information sticker was provided. No hazardous waste was observed in the dumpster at the time of inspection. Discussed proper management of universal waste (e.x. light bulbs, batteries). A Certificate of Return to Compliance (CRC) is being issued. The minor violations on this report must be corrected within 30 days. Complete the CRC and return to this Agency within 30 days.

INSPECTOR COMMENTS On site for an initial hazardous waste inspection. Consent to inspect and take any necessary photos was given by Josh Jones, General Manager. Walked throughout the facility. Observed hazardous waste storage areas. Facility making airplane antennas, they store their waste in a cage in the back of the building, they also have a dust collector, which the drum is integral. The facility does a small amount of sandblasting and they put that waste in with the dust collector waste. They also now put the floor sweepings in with the duct collector waste. Containers were closed and properly labeled, except the waste acetone and waste paint were missing the accumulation

According to the CERS database, your business remains out of compliance with the annual certification requirement and a violation is being cited. Businesses are required to annually review and certify that their information in the California Electronic Reporting System (CERS) is complete, accurate and in compliance by March 1st. Your business was notified via email on 5/4/23 that your facility was out of compliance with this requirement. Please visit <https://cers.calepa.ca.gov/> to access CERS and submit your completed HMBP forms. Failure to submit HMBP forms is a violation of the California Health & Safety Code and California Code of Regulations. Progressive enforcement will be taken by this Agency if a submittal/certification has not been completed within 30 days of this report. Violation 1010008 issued this date. Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval Notes: Regional Board staff conducted a routine compliance inspection of the above facility on March 7, 2012. The SWPPP was adequate with the exception of outdated training records. The SWPPP identified annual employee training, however, the last date on file was December 16, 2010. Also, update the SWPPP to remove the section which mentions bus washing in the northern portion of the facility since that activity has ceased. Waste oil observed in small miscellaneous containers between Buildings 110 and 107 without proper BMP implementation. Also noted two 55-g drums used as trash recepticals for flourescent lights, however, the drums were half full of rain water. The facility last sampled on April 14, 2006. All Annual Reports since then note non-qualifying events. Board staff directed Mr. Andrews to collect from the next storm event regardless of it qualifying or not.

Mr. Draybek accompanied us on a tour of the site. Noted that general housekeeping at the mechanics shop area needed to be improved, and could sweep paved area more often. Observed school district personnel washing buses on the concrete paved area adjacent to the flood control channel and fuel dispensing island (see photographs). District employee Eddie Cooper (former contact person) stated that they now use a non-phosphate detergent, but continue to wash buses in this area. School district noted this as an "unauthorized discharge" on Form 3 in the 2000-2001 annual report. SWPPP was not available for review because Mr. Schwalm not on site. Will telephone Mr. Schwalm to review inspection findings, 2000-2001 annual report (several forms were incomplete), and contents of the notice of violation letter. Grounds and Facility Services, was also present for the inspection. This facility is owned by the Fullerton School District and currently has approximately 25 employees handling hazardous waste. Per Jon Andrews, hazardous waste storage areas are currently inspected weekly. Per Neil Ferone, employees receive training for handling hazardous waste as needed and risk management refresher training. Hazardous waste manifests for the last three years from the transportation department were available for review during today's inspection. Per Neil Ferone, the maintenance department did not have hazardous/universal waste picked up in 2013 or 2015. The emergency response plan information sticker was provided. [Truncated]

The SWPPP identified annual employee training, however, the last date on file was December 16, 2010. Also, update the SWPPP to remove the section which mentions bus washing in the northern portion of the facility since that activity has ceased. Waste oil observed in small miscellaneous containers between Buildings 110 and 107 without proper BMP implementation. Also noted two 55-g drums used as trash recepticals for flourescent lights, however, the drums were half full of rain water. The facility last sampled on April 14, 2006. All Annual Reports since then note non-qualifying events. Board staff directed Mr. Andrews to collect from the next storm event regardless of it qualifying or not.

Mr. Draybek accompanied us on a tour of the site. Noted that general housekeeping at the mechanics shop area needed to be improved, and could sweep paved area more often. Observed school district personnel washing buses on the concrete paved area adjacent to the flood control channel and fuel dispensing island (see photographs). District employee Eddie Cooper (former contact person) stated that they now use a non-phosphate detergent, but continue to wash buses in this area. School district noted this as an ""unauthorized discharge"" on Form 3 in the 2000-2001 annual report. SWPPP was not available for review because Mr. Schwalm not on site. Neil Ferone, Assistant Director of Maintenance, Grounds and Facility Services, was also present for the inspection. This facility is owned by the Fullerton School District and currently has approximately 25 employees handling hazardous waste. Per Jon Andrews, hazardous waste storage areas are currently inspected weekly. Per Neil Ferone, employees receive training for handling hazardous waste as needed and risk management refresher training. Hazardous waste manifests for the last three years from the transportation department were available for review during today's inspection. Per Neil Ferone, the maintenance department did not have hazardous/universal waste picked up in 2013 or 2015. The emergency response plan information sticker was provided. [Truncated]

Violation Date: 07-18-2019
Citation: HSC 6.7 25299(a)(9) - California Health and Safety Code, Chapter 6.7, Section(s) 25299(a)(9)
Violation Description: Leak detection equipment disabled or tampered with in a manner that would prevent the monitoring system from detecting and/or alerting the owner/operator of a leak.
Violation Notes: Returned to compliance on 07/18/2019. The sensor in the diesel UST STP sump had been raised ~9.5" from the bottom of the sump. Liquid was present in this sump. The sensor in the 87 auxillary fill sump had been placed at the highest point of the sump, on top of a bung plug, preventing proper monitoring. Liquid was present at this sump.

Violation Description: For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes: Returned to compliance on 07/27/2021. Responses to alarms were not properly documented. The D.O. inspection dated 1/29/21 failed to account for alarms in the 87 Main fill sump on 1/23/21 and the 87 auxiliary fill sump on 1/21/21. Additionally, while these alarms showed up on subsequent monitoring history print outs, they did not appear on the copy of the print out included with the 1/29/21 inspection. Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 05/02/2023. OBSERVATION: Facility currently utilizes ATG for overfill prevention. USTs with multiple ATGs that only can activate external alarms when the first UST overfill condition occurs do not meet overfill requirements. CORRECTIVE ACTION: Ensure each UST has a functional overfill prevention independent of the other USTs at the facility (i.e., installing a separate alarm unit or other appropriate OPE equipment for each tank). Replacement and/or the installation of new OPE equipment will require the facility to submit a plan check to this Agency. Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: 1. Overfill prevention testing for the diesel flapper valve was required to be completed by 7/31/2024. 2. Diesel flapper valve failed testing on 8/8/2024.

Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: This site has been included on the National Priority List (NPL). Therefore, to the extent that federal funds are available, the Department will seek federal funds to cover the RI/FS study, remedial action, operation and maintenance and final cleanup. To the extent that federal funds are available, federal funding for remedial action, operation and maintenance as well as the final remedy will be at the 90 percent level. The State must pay a 10 percent share toward the federal funds awarded for those activities. A portion of the Bond fund will be used to meet the State's share. Some of the Bond fund will support certain State-only expenditures. Those State-only expenditures are used to support necessary ground water investigation, operation and maintenance. community relations and removal/remedial action activities, which EPA will not fund, and

Site Description:	to support important site activities until federal funding is provided through the State's cooperative agreement with EPA. DHS is utilizing HSA and Bond funds for the EIR since EPA would not authorize federal funds for this activity. In addition, Bond funds will be utilized for the preparation of the RAP since EPA will not fund this State activity. The current estimates for Phase I remediation at the McColl Site range from \$25 million to \$110 million. DHS will be responsible for 10 percent of the Phase I cleanup remedy. For purposes of this Expenditure Plan, DHS has estimated \$110 million for the Phase I cleanup cost. Phase II cleanup costs cannot be estimated until the ground water RI/FS is completed. To ensure timely implementation of the ground water RI/FS, DHS is projecting a State share for this activity. DHS and EPA will pursue cost recovery of all expenditures from any identified responsible parties.
Hazardous Waste Desc:	The McColl site is an inactive waste disposal facility located in the northwestern portion of the City of Fullerton. From 1942 to 1946, acid sludge, a refinery waste resulting from production of aviation fuel, was disposed in a series of twelve waste pits at the site. In the early to mid-1950s, drilling mud from nearby oil fields was used to cover the six eastern pits. In the late 1950s, the six remaining sumps were covered by the construction of the Los Coyotes Golf Course. Approximately 97,100 cubic yards to 265,000 cubic yards of waste and contaminated soil are onsite.
Threat To Public Health & Env:	Acidic petroleum sludge is the predominant waste at this site. The waste is characterized by a low pH sulfur content and high concentrations of aromatic and aliphatic hydrocarbons. When disturbed, the waste produces air emissions of sulfur dioxide and volatile hydrocarbons, which include benzene. In addition, the waste contains tetrahydrothiophene, an odor-producing compound.
Site Activity Status:	Ground water contamination from the site has been detected in the shallow and deep aquifers, however, nearby public water supply wells are not contaminated. Also, under disturbed site conditions, there is also a risk from air emissions containing the above noted contaminants. Currently, all wastes are covered with soil, therefore there are no adverse air emissions coming from the site. The site is also completely fenced and guarded to prevent unauthorized access and direct contact with waste materials.
	A two-phase remediation process is being taken at the McColl site. The first phase will address cleanup of the contaminated soils and waste at the site. The second phase will address ground water contamination at the site. DHS is preparing an environmental impact report (EIR) for the site as required by the Kern County Superior Court Injunction (May, 1985) and a RAP. EPA has conducted additional investigative work (soil contamination study, waste characterization and ground water study). EPA is also preparing the supplemental re-evaluation of alternatives (SROA) which evaluates three categories of remedial alternatives. The RAP, SROA and proposed plan documents will be released for public comment in late Winter, 1988. These documents will set forth the DHS/EPA proposed remedy for the contaminated soils and waste materials at the site. Because ground water contamination has recently been confirmed, DHS will undertake a full-scale ground water remedial investigation and feasibility study (RI/FS) in early 1989. A separate remedial action will be performed by DHS/EPA to address contaminated ground water.
