Violation Description:	Failure of sensor to be located in the proper position/location.
Violation Notes:	Returned to compliance on 06/03/2014. The sensor on the hydraulic oil piping sump was positioned on the side opposite the piping, in violation of 23CCR 2630(d). There was enough liquid present on the piping side of the sump to cause the monitoring system to go into alarm when the sensor was properly positioned. Two other piping sumps have sensor holders that position the sensors so that they are not at the lowest point of the sump and able to detect a release at the earliest possible opportunity. Please provide a work order or other documentation that indicates the fluid has been removed from the hydraulic oil sump and that all sensors are properly placed in the sumps. Submit the documents to this Agency within 30 days. Disabling or otherwise preventing the monitoring system from detecting a leak at the earliest possible opportunity may result in penalties and/or enforcement action.

Eval Notes: On site for routine UST inspection, monitoring system certification,
and spill bucket testing. The facility has eight double-walled tanks
monitored by Veeder Root system. Two of these tanks are used for motor
vehicle fuel storage, with the remainder of the tanks used for
automotive fluids and waste oil storage. The monitor is operational
for audible and visual alarms. Panel display reads all functions
normal. Positive shutdown and fail safe programming were verified for
pressurized piping systems. The unleaded and diesel systems have
pressurized piping. The new oil/lubricant tanks have suction piping,
and the waste oil tank has gravity piping, including a remote fill.
All tanks, with the exception of the waste oil tank, have flapper
valves for overflow prevention. The waste oil tank utilizes the
in-tank probe for overflow prevention. The sensors in the fuel tank
annulars, turbine sumps, and fill sumps shutdown the turbines when
submerged in liquid. The sensors [Truncated]

On 6/19/14 I spoke to Robert LaRoche and Ken Bishop in regards to the NOV s sent. Explained the following: 1This was written a few weeks ago and some of the items have been corrected, as well as some items were not included in NOV that prob should have been for example :dismantled leak detector 2Received Financial Responsibility from Ken (has been approved) 3Sensors are not to be tampered with, seems to be a history of raised sensors. (recommended periodic inspections maybe your DO could do this monthly) 4Spoke to Ken and indicated that work orders are not on site. Possible solution: alarm log can be maintained on site 5Secondary components failed components are required to be fixed within 60 days of failure. I currently have Secondary components that were tested in November that are still waiting to be fixed.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Overfill protection provided by audible/visual alarms. Sensors were observed positioned so as to initiate alarms at the earliest point possible. Sensors were re-positioned in a true vertical position upon installation after testing. Alarm history and setup tape reviewed while on site. The following were tested: - Sensors, initiated positive shutdown to the turbines when tested in water - Fail Safe and Positive Shutdown - Overfill protection (ATGs set at 90% capacity) for an external audible and visual alarm - Spill buckets using a visual hydrostatic test - Leak [Truncated]

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators,

Stored products are regular unleaded, premium, and diesel fuel. The monitor is operational for audible and visual alarms. Panel display reads all functions normal. Positive shutdown and fail-safe programming were verified. Flapper valves are used for overfill prevention. The sensors in the fuel tank annulars, turbine sumps, and UDCs all shutdown the turbines when submerged in fuel. The sensors in the fill sumps trigger and audible and visual alarm when submerged in fluid. The electronic line leak detectors were tested with a simulated 3 gph leak. The 87 and diesel detectors were determined to be operational. The 91 leak detector failed testing. Spill buckets were visually tested for 30 minutes. At

Eval Notes: Onsite to conduct routine UST inspection and hazardous waste inspection. Consent to inspect the facility was provided by the Manager Rocio Flores. The Monitoring System Certification testing was conducted by Enrique Aguirre of Tank Tek. His certs and lic. are current and valid. The Veeder-Root TLS-350 monitoring panel displayed "all functions normal" and audible and visual alarms were demonstrated operational. The panel was noted marked with a sticker from the most recent monitoring certification (11/15/12). The following observations were made: - The site has 3 double walled USTs (87, 91, Diesel) with 4 UDCs. - They utilize flappers for overfill monitoring - They have electronic leak detectors. All testing was not witnessed by this agency however the tester indicated the following: -All sensors passed testing -All Spill buckets passed a 1 hr visual hydrostatic test. -Fail safe, sensor out, and the ESO triggered shutdown of the turbines. -The 87 and 91 [Truncated]

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.
