THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI). The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The inspection was conducted with business owner, Jeff Lausch. An EPA ID# form was filled out during the inspection and faxed to DTSC. The facility generates spent acetone from cleaning brushes. Two quart size plastic containers storing spent acetone are kept in a parts washer type stand with a lid. According to owner the acetone is used until it is too dirty to use and then mixed with foam dust to harden and dispose of in municipal trash. I explained that mixing foam dust to harden the acetone is considered treating hazardous and this process must be discontinued. The facility has a empty 55 gallon that will be used to for storing the spent

Environmental Interest/Information System:

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Eval Type: Industrial Storm Water Compliance Evaluation

Eval Notes: Regional Board staff conducted a compliance inspection of the above facility on May 29, 2019. Staff met with Mr. Curtis Allen, the LRP. The SWPPP and training records were reviewed and up to date. The SWPPP was dated December 2018 and storm water training was dated March 2019. The facility is currently in Level 1 for Zinc. The facility collected three storm water samples this reporting period. A site walk was conducted and the facility collects a sample from one outfall. Absorbent socks are used as per the facility's Level 1 ERA Report. Housekeeping is conducted once a week. Drums containing flammable liquids are stored outside on secondary containment along with a tank of propane tanks. The facility is currently working to switch their NOI permit to a NEC permit. No violations were observed at the time of the inspection.

Eval Notes: Weather: hot and sunny. Contact could not produce a SWPPP; directed to develop a SWPPP. Observed bar soap scrap waste stored outside in plastic waste barrels; some are open. Most are closed but a few are filled so that a lid cannot be attached securely. Contact advised to ensure lids can be secured. Discussed sample points; advised that there was no need to separately sample roof downspouts unless there was a need to investigate the source of a benchmark excursion. Must continue to sample at curb/gutter of drive entrance.

STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Eval Notes: On site to conduct a routine hazardous waste inspection. Met with Son Pham, president of the site. Facility is a small quantity generator of etching wastes. Inspected the facility, perimeter, and the hazardous waste storage area. Inspected the municipal trash for hazardous waste. No hazardous waste was observed in the dumpster. Facility has excess (off-spec) solder mask ink that is dried before disposing of it in the municipal trash. The site needs to conduct a waste determination to determine if the ink is hazardous waste prior to letting the material dry or placing in an oven to cure. A violation for waste determination will be cited. Observed hazardous waste management practices and reviewed documentation including manifests and emergency response information. A copy of this report will be sent to sonpham@soldermask.com.

Eval Notes: On site to conduct a routine Hazardous Waste (HW) inspection. Consent to inspect was granted by Son Pham, President. Also present was Trevor Freeman of OCHCA. Facility is a small quantity generator of printed circuit board manufacturing waste. Rinse waters from the Ferric Chloride etch process is closed loop and hauled away with the spent concentrated Ferric Chloride bath solution via manifest. Pumice dust wastewater from the polishing rinse sinks is pumped to the back storage area tanks and settles, where wastewater is then discharged to sewer on a discharge permit issued by OC Sanitation District and settled pumice dust is then hauled via manifest. Facility also dries excess solder mask ink for disposal to the municipal trash. Facility's consultant and this Agency have reviewed the facility's process and determined that the unused solder mask ink is non-hazardous per SDS and generator knowledge. Walked throughout the facility and observed hazardous waste storage areas. - No haz

Eval Notes: On site to conduct an annual routine Hazardous Waste Inspection. Met with Son who explained the process, escorted me through the site and gave consent to enter/inspect. Currently no hazardous waste stored on site. Son indicates he labels all drums with the required information once waste is generated. Etching process, Ferric chloride is stored in machine and is taken out periodically. Oxidation of circuit boards. Pumice dust is rarely generated about every 5 years it is cleaned out of the tanks. Any ink that is used is scraped cleaned from containers and containers are disposed of in the municipal trash. Electro polishing, contains Sulfuric Acid and Phosphoric acid. About every 3 years it is disposed of. Documents Available for review: 1. Hazardous waste Manifest/Receipts (keep a copy on site for three years). - Note: A copy of the federal manifest must be sent to DTSC. (Department of Toxic Substances Control, P.O. Eval Notes: Spoke with Son Pham and consultant on 10/28/19 via phone. Consultant and Son Pham stated they have made a determination, based on generator knowledge - using safety data sheets, that the unused solder mask is not hazardous waste. In addition, Son Pham and his consultant have clarified that the rinse waters from the Ferric Chloride etch process is closed loop and is hauled away with the concentrated bath solution via manifest. For this reason, violation I325 will be voided. After further review of the amount of RCRA hazardous waste generated in the last 12 months, the facility generates more than 100 kg/month of federal hazardous waste. Based on this amount, the facility needs to obtain a federal EPA ID number. Please obtain a federal EPA ID number by applying online via <https://rcrainfo.epa.gov>. Violation I352 will be cited below. A copy of this report will be sent to sonpham@soldermask.com.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The FINDS: database may contain additional details for this site.

Eval Notes: On January 2, 2003 under clear, warm conditions, Regional Board staff conducted a routine compliance inspection of the above referenced facility. Previous analytical history showed high levels of TSS (122mg/L) and COD (293mg/L). The facility SWPPP was reviewed and found that the Certification statement was not signed. The Monitoring information was up to date and BMPs adjusted as needed. Various improvements have been made since the last rainy season. A grassy swale has been constructed where a soil filled planter area once was. A street sweeper has been purchased and is used continually to remove fugitive saw dust. Extensive baghouse utilization is employed and additional structural barriers to reduce the wind's effect on moving particulate matter off site. With the implementation of these additional BMPs, the site should substantially reduce its pollutant load associated with storm water run off. Documented training specific to storm water requirements was not documented. Additional BMPs should be implemented in the forklift service area. Equipment repair was conducted in an area exposed to storm water. However, oil and grease levels shown on the analytical report were low.

A street sweeper has been purchased and is used continually to remove fugitive saw dust. Extensive baghouse utilization is employed and additional structural barriers to reduce the wind's effect on moving particulate matter off site. With the implementation of these additional BMPs, the site should substantially reduce its pollutant load associated with storm water run off. Documented training specific to storm water requirements was not documented. Additional BMPs should be implemented in the forklift service area. Equipment repair was conducted in an area exposed to storm water. However, oil and grease levels shown on the analytical report were low.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker,

The SWPPP uploaded to SMARTS, dated July 2016, includes metal debris as a pollutant of concern in the facility's Pollutant Source Assessment. The facility is currently only sampling for the general parameters. A site walk was then conducted and housekeeping is conducted daily. Pallets are stored outdoors and a boneyard of racks are temporarily stored outside. Seacrates observed outdoors contain administrative storage. Roll-off bins contain aluminum chips from industrial processes and are covered during a rain event. The roll-off bins are picked up every 3 weeks. Some aluminum chips were observed on the ground around the bins. Racks containing industrial materials were observed around the facility.

There is one double-walled diesel tank with a capacity of 2,000 gallons connected three back-up generators. The UST system is monitored by a Veeder-Root TLS-300C panel. The STP and fill sump are monitored using VR-208 sensors. The tank has a VR-420 sensor for annular monitoring. Check valves were observed near the generator and meet the suction piping exemption criteria. Monthly visual inspections of unburied fuel piping are complete. Overfill prevention is provided by a flapper valve in the tank's drop tube and the ATG is connected to outside annunciator. Sensors triggered audible and visual alarms. Spill buckets passed the hydrostatic test. The following documents were reviewed: Permit Monitoring Plan, Response Plan Monitoring Cert: 5/16/17, SB989: 5/20/15 DO monthly inspections, DO [Truncated]
