Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Description: Failure of an owner or operator to obtain a detailed chemical and physical analysis of a representative sample of the waste, which includes all information necessary to manage waste in accordance with the requirements, and to meet LDR requirements; Failure to analyze wastes according to the frequency specified in the plan and to retain waste analysis documentation for three years.

Violation Notes: Returned to compliance on 09/07/2023. The current Waste Analysis Plan (WAP) does not accurately reflect the test methods used by the facility to make a waste determination of the hazardous wastes being treated on site. - The WAP indicates that EPA Test Method 6010B, 6020, or "equivalent" will be used as a test method for heavy metals, as well as the Toxicity Characteristic Leachate Procedure (TCLP) or "equivalent". Testing has not been conducted using these test methods. The businesses consultant, Steve Lichten, explained that the facility is currently using generator knowledge to make a waste determination for all wastes that enter the treatment system and/or discharged to sewer alongside EPA Test Method 200.7 (wastewater test method). EPA Test Method 200.7 is not considered an equivalent under SW-846 as is required in Title 22 CCR 66261.20. Mr. Lichten stated that nothing from their operations is ever discharged to sewer without first going through the treatment system or being directly hauled as hazardous waste.

Violation Description: Failure to determine if the waste generated is a hazardous waste.
Violation Notes: Returned to compliance on 04/11/2022. OBSERVATION: Owner/Operator failed to determine if the waste generated from multiple plating tanks is a hazardous waste. In April 2021, the facility began to batch treat aqueous waste with metals (mainly copper) from various rinse tanks containing copper, lead, and nickel. The wastewater treatment system involves pH neutralization, adsorption of metals using flocculant/coagulant, and a filter press to remove excess water. The facility treats approximately 200 gallons/day. The facility has a permit with the OC sanitation department (1-111129 - issued 4/29/2021) for the discharge of treated waters. In order to properly assign a treatment tier, samples from all points of generation must be collected and analyzed. CORRECTIVE ACTION: Collect samples from all plating tanks/washes/rinses entering the batch treatment system. Submit samples to a state certified laboratory and request analyses for CAM-17 metals.

Photographs of the facility were taken throughout the inspection and are attached to this report. The pools of liquid previously observed on the ground in the production room during the 12/28/2023 inspection under the previous owner, Coast to Coast Circuits, Inc., has since been containerized as hazardous waste but flooring remains heavily stained. Most equipment has been taken apart and staged for removal as hazardous waste with the exception of any saleable equipment. Wipe samples of the hazardous waste treatment areas were taken by Steve Koester on this date prior to the inspection and were not observed by this Agency. Test results for TTLC indicate elevated levels of the following: Filter Press/Hopper (FP-1) - Copper Tank T-1 Footprint - Copper - Le

Hi Jennifer, For the additional structural engineering, we had to have Coast to Coast (formerly Speedy) contract out to Plump Engineering, and industrial and atructural engineering firm. They are also doing much of the other facility upgrades to Coast to Coast's facility. The overflow tank (one of the three subject tanks) has been upgraded and reinforced, and Plump is working onthe structural/seismic securement measurement and calcs for the remaining two tanks. They are also evaluating the integrity of the containment basin for the waste treatment system. They had a delay in starting as they were finishing up an existing project, but are on it now. The non-structural portions of the assessment are drafted. we're just waiting on completion of the seismic and containment work. We anticipate the system will need some additional turnover strengthening. The facility does have a plan to completely upgrade the [Truncated]

Eval Notes:	On site for a Recycler inspection. Met with Chris Pollard and Brian Rivas of Coast to Coast Circuits. Consent was provided to enter and inspect the facility. Facility recycles waste process and rinse waters. Waste water from various process tanks are pumped through Ion exchange cylinders to remove the metals. Water then flows to a holding tank and undergoes pH neutralization. The last process is the water is evaporated by an Encon evaporator unit. per the RMR, 90% - 100% of water is reused as process water. On this date, Mr. Brian Rivas was unable to show how or where the evaporated water was going. Per my observation, the water was going to a clarifier and piped below grade. It was unclear as to where the water was going from there. A follow-up inspection will be scheduled to clarify this process. A recyclable materials report (RMR) was submitted on CERS and accepted. The facility claims an exemption for recycling under H&SC 25143.29(c)(2). On this date, I [Truncated]

I would like to know if you have any record or knowledge of a release of ammonia in the last five years at Speedy Circuits Inc. located at 5332 Commerce Dr. HB 92649. Any kind of release that would have caused the HBFD response to this facility or evacuation. Also, I told them to contact the HBFD to request a coordinated emergency response training with the facility regarding the CalARP regulated chemistry. They should have sent you a request, same as last year.

Eval Notes: Onsite for a LQG hazardous waste inspection. Met with Billy Dawson of Coast to Coast Circuits. Consent was provided to enter and conduct inspection activities. Facility conducts plating operations for circuit board manufacturing. Rinsewaters from plating tanks are recycled via ph Adjust, evaporating and removing sludge, then going through an ion-exchange unit. All water is then reused back into the process. The following was observed: All hazardous waste generated was labeled and properly stored. (1) drum containing gold/cynaide waste was observed passed the accumulation date. Please have this removed immediately. Documentation was in compliance. Weekly checklists, training, Biennial report, SB14, and tank assessment were all available and current.

Eval Notes: Emailed Steve Lichten on this date. Environmental Consultant for Coat to Coast. For an update on PE Assesment EMAIL sent on 7/8/16 by Steven Hazardous Waste Tank PE Certification: Based on our PE's review, there needs to be some additional seismic securement/anchoring as well as some repair to one tank. Coast to Coast is in the process of having the one (the overflow) tank repaired by the tank's manufacturer (the structural supports) and having a proper cover fabricated. The seismic/structural review is being subcontracted out to Plump Group - they are the engineering firm working with the facility on their various facility upgrade projects. They will be designing the likely needed upgraded anchors and verifying the containment under this area and adjacent facility process tanks. Once that's done, any needed upgrades (anchoring, containment, etc.) will go forward. But it is not a quick process, and simply cannot be completed within the 30 day [Truncated]

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database
The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Eval Notes:	On site for routine UST inspection, monitoring system certification, and spill bucket testing. Site contact is Navjot Singh, Manager. The facility has two double-walled tanks (a 15,000-gallon unleaded tank and a 10,000-gallon supreme) monitored by a VPH. A Veeder Root TLS-350 system is also used for monitoring. The monitor is operational for audible and visual alarms. The panel display reads all functions normal. An automatic tank gauge is used for overfill prevention. The sensors in the fuel tank annulars (303 s), piping and turbine sumps (208 s) shut down the turbines when submerged in liquid. The turbine sumps are also monitored by smart sensors. The UDCs and vent box are monitored by 208 sensors which shut down the turbines when submerged in fluid. The electronic line leak detectors were tested with a simulated 3 gph leak and were determined to be operational. Spill buckets were visually tested for 60 minutes. All spill buckets passed testing. On site to witness annual monitor certification and to conduct a routine UST inspection. Met with Ayesha Khan of 7-Eleven and Francisco Castro of Tanknology. Mr. Castro conducted the tank testing, monitor system certification, and spill bucket testing. Mr. Castro's ICC and Veeder-Root certifications were observed and verified. The facility contains (1) 15,000 gallon double-walled UST containing regular grade gasoline and (1) 10,000 gallon double-walled UST containing premium grade gasoline monitored by a Veeder-Root TLS-350R system. The monitoring panel read "all functions normal". Alarm history and set-up tape were reviewed during this inspection. The USTs use a flapper valve for the overfill protection. An ATG is also utilized as overfill protection and sets off an audio and visual alarm at 90% fill capacity. The following tested and PASSED: - The STP Sump, Fill Sump, annular sensors, and UDC sensors initiated positive shutdown to the turbines when tested [Truncated]

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
