Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The FINDS: database may contain additional details for this site.

Evaluation:

Eval General Type: Other/Unknown
Eval Date: 03-24-2014
Violations Found: Yes
Eval Type: Other, not routine, done by local agency
Eval Notes: Not reported
Eval Division: Orange County Environmental Health
Eval Program: HMRRP
Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 06-30-2021
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Met with Plant Manager Mark Schultz. Consent was provided to enter and conduct inspection activities. The following was observed on this date: -- Hazardous waste generated was properly stored and labeled. -- Waste manifests were available for review. Manifests are provided electronically by the hauler. -- Perimeter of the facility was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The facility is in compliance.

Eval Notes: review of facility info The submittal was declined, please make the following changes and resubmit within 30 days; 1. on the business activities page, also check 'yes' to generating hazardous waste as you are in our programs as a hazardous waste generator 2. you have listed that you have 1320 gallons or more of petroleum based product storage in aboveground tanks 55 gallons and larger. You have also not disclosed this on your materials page, possibly indicating that you do not have 1320 gallons or more of petroleum aboveground storage. Please research this, and if you do not, then place a "no" on the business activities page under above ground storage of petroleum products over 1320 gallons. Research and resubmit within 30 days.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI). California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The FINDS database may contain additional details for this site. Please contact your EDR Account Executive for more information.

Violations:

Site ID: 136743
Site Name: MS Bellows
Violation Date: 05-25-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/21/2022. OBSERVATION: Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA within 30 days from now.

Eval Notes:

Onsite for routine hazardous waste inspection. Consent to enter and inspect was granted by CJ Hamren. The facility generates sufficient quantities of non-RCRA hazardous waste as to be regulated as a large quantity generator (LQG) in California. The facility treats nickel sulfate solution under the PBR tier. Observed the facility, treatment area, hazardous waste storage area, and satellite storage areas were observed. The following conditions were observed: - Containers of hazardous waste were stored closed and properly labeled - All containers of hazardous waste had accumulation start dates within the maximum allowable accumulation time - No evidence of hazardous waste spillage or runoff was observed. - Treatment area floor was dry. The following documents were available for review: hazardous waste manifests, emergency plan, training records, training plan, and hazardous waste area inspection logs.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Environmental Interest/Information System:

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

Registry ID: 110009542600

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site. Please contact your EDR Account Executive for more information

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The FINDS: database may contain additional details for this site.

capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 07/10/2019. OBSERVATION: The owner/operator failed to perform an inspection of the overfill prevention system by October 13, 2018. CORRECTIVE ACTION: An inspection of the overfill prevention system was conducted on 3/19/2019 for the fill tube shut-off valve and results were submitted to this agency. The violation was abated/corrected on-site.

Violation Division: Orange County Environmental Health
Violation Program: UST
Violation Source: CERS,

Site ID: 32248
Site Name: G&M Oil Co. #114
Violation Date: 08-05-2021
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "

Violation Notes: Returned to compliance on 09/17/2021. As demonstrated by the failed Spill Container Tests: 1. The 87 west spill container failed to be liquid tight. CORRECTIVE ACTION: The certified technician replaced the 87 west tank spill container, retested it, and the container passed. The violation was corrected/abated on-site. 2. The 91 spill container failed to be liquid tight. CORRECTIVE ACTION: Install or repair spill buckets to meet all of the listed requirements. No plan check is necessary if spill bucket is repaired or replaced with a like-for-like container. After repair or replacement, have the spill bucket tightness tested using an approved method by a certified UST service technician. Submit the test results to this Agency on the CERS website, <https://cers.calepa.ca.gov/>, by email, or mail within 30 days.

Eval Notes: On site for routine UST inspection and monitoring system certification and spill bucket testing. Site contact is Almaz Belayneh, Manager. The facility has four single-walled tanks (two 10,000-gallon unleaded (87) tank, one 10,000-gallon supreme (91), and one 10,000-gallon diesel tank). The tanks are monitored by a Veeder Root TLS-350R system. The monitor is operational for audible and visual alarms. The panel display reads all functions normal. Flapper valves are used for overfill prevention in tanks. The sensors in the piping and turbine sumps (208 s) all shut down the turbines when submerged in liquid. The UDCs are monitored by 208 sensors. The sensors shut down the turbines when submerged in fluid. The mechanical line leak detectors were tested with a simulated 3 gph leak and were determined to be operational. Spill buckets were visually tested for 60 minutes. All spill buckets passed testing. Testing was conducted by Enrique Aquire of Tank-Tek [Truncated]

Eval Notes: The following documents were reviewed by this Agency (Received 9/9/2021): -CSLD Test Results dated 4/6/2021 with passing results for each tank. -Copy of the current Certificate of Financial Responsibility which was stated would be available for review on-site. The following violations were observed corrected and will be abated: I487 and I583. CORRECT THE FOLLOWING VIOLATIONS (Observed on 7/30/2021): 1. Violation I355 As demonstrated by the failed Spill Container Tests: a. The 91 spill container failed to be liquid tight. CORRECTIVE ACTION: Install or repair spill buckets to meet all of the listed requirements. No plan check is necessary if spill bucket is repaired or replaced with a like-for-like container. After repair or replacement, have the spill bucket tightness tested using an approved method by a certified UST service technician. Submit the test results to this Agency on the CERS website, <https://cers.calepa.ca.gov/>, by email, or mail [Truncated]

Eval Notes: This is an in-office inspection report to document the review of the SB 989 test results for the testing conducted on 9-8-16 by Daniel Salas of Tank-Tek. The facility has 4 single walled USTs (87, 89, 91 and Diesel). -The product secondary of each piping passed testing. -The 87, 89 and Diesel STP passed testing. The 91 STP Sump failed due to a ripped penetration (see violation). -The 87, 89, 91, and Diesel Fill sumps passed testing. -The 1/2, 3/4, 5/6, 7/8, and 9/10 UDCs all passed testing. At this time plan check SR0128761 has been submitted and includes the repair tot he 91 STP sump. Ensure the retest of the 91 STP sump is scheduled 48 hrs prior to testing. Thank you .

On site to conduct a routine monitoring certification inspection. Met with Robert Slunaker, technician with Tank-Tek. The following certifications were verified: ICC, VR, VMI, Phil-Tite, and Franklin Fueling. The facility has four single-walled Xerxes tanks: 87 (10K), 87 auxiliary (10K), 91 (10K), and diesel (10K). The site has pressurized, double-walled piping; vent and vapor recovery piping are single walled; UDCs are single-walled. The UST system is monitored using a Veeder Root TLS-350R panel. The panel display indicates "All Functions Normal". Overfill prevention is provided by fill tube shut off-valves for all tanks. The tanks are monitored as follows: Turbine Pump Sumps: VR-208 Line leak detectors: VR - PLLD UDCs 1/2, 3/4, 5/6, 7/8, 9/10: VR-208 Leak test reporting format for single walled tanks was verified to be "Enhanced". Probability of detection was verified to be 99%. The ATG float was verified to be 4 inches as programmed on Veeder Root [Truncated]

Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewed outstanding UST electronic forms. Forms were declined. Facility has made some of the required corrections. The following corrections are still needed: Monitoring Plan - Site inspection on 7/20/16 indicates the leak detector model for the 91 product is FE Petro STP-MLD and diesel is Red Jacket FXIDV. Monitoring Plan Site Map - upload a map with the corrected leak detector model information. Certificate of Financial Responsibility - have George Pearson sign the form and upload a signed copy.

Eval Notes:	Reviewed and declined UST submittal. The following correction is still needed: CERTIFICATION OF FINANCIAL RESPONSIBILITY Certification expired on 6/19/17. Provide current financial responsibility. Also, if using the State Fund, please note that the State Fund will only cover \$900,000 and not the \$1,495,000 listed. Either remove the State Fund as a mechanism and only use the insurance policy listed or modify your form and CFO Letter to indicate the correct coverage amounts. If only using the insurance policy, then uncheck the box for State Fund on the Operating Permit form. Violation I is being cited for failure to maintain current certification of financial responsibility. Submit current certification to CERS within 30 days.

Eval Notes:	This is an in-office inspection report to document the submittal and approval of the Application for UST Modification SR0128761. A review of the SB 989 test results for the testing conducted on 9-8-16 by Daniel Salas of Tank-Tek, indicated the 91 STP sump failed testing. The scope of work includes the following: - Repair to the 91 STP sump. - Remove and replace the piping penetration in the 91 STP sump. - Disconnect, remove and replace all the Dispensers. - Installation of Bravo conversion plates on each of the existing UDCs. Ensure the retest of the 91 STP sump is scheduled 48 hrs prior to testing. Plan SR0128761 is approved and ready for pick up. Thank you .

Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	Returned to compliance on 07/10/2019. OBSERVATION: The owner/operator failed to perform an inspection of the overfill prevention system by October 13, 2018. CORRECTIVE ACTION: An inspection of the overfill prevention system was conducted on 3/19/2019 for the fill tube shut-off valve and results were submitted to this agency. The violation was abated/corrected on-site.

Eval Notes: On site to conduct a routine monitoring certification inspection. Met with William Coulter, technician with Tank Tek. The following certifications were verified: ICC, VR, and VMI. The facility has four single-walled Xerxes tanks: 87 (10K), 87 auxiliary (10K), 91 (10K), and diesel (10K). The site has pressurized, double-walled piping. Overfill prevention is provided by fill tube shut-off valves (flappers) for all tanks. The UST system is monitored using a Veeder Root TLS-350 panel. The panel display indicates "All Functions Normal". Positive Shutdown and Fail Safe programming were verified. Leak test reporting format for single walled tanks should be "Enhanced". Probability of detection must be 99%. The tanks are monitored as follows: Turbine Pump Sumps, Fill Sumps: VR-208 Line leak detectors: VR - PLLD UDCs: VR-208 All sensors were tested hydrostatically and passed. Spill buckets were tested hydrostatically for one hour and passed. The following [Truncated]

Eval Type: Routine done by local agency

Eval Notes: On site for a routine underground storage tank inspection and to observe the annual monitoring system certification, final installation for plan check (SR0147550), and spill bucket testing. Tanks were installed on 02/14/2023. Testing was conducted by Enrique Aguirre of Tank-Tek Environmental. Technician certifications (VR, ICC, VMI) were verified on site. The facility has the following double-walled tanks:
- Regular (12,000-gal.) - Premium (10,000-gal.) - B20 Biodiesel (10,000-gal.) - E85 (12,000-gal.) The UST system is monitored by a Veeder Root TLS-350. The monitor was operational for audible and visual alarms and the panel read "all functions normal." Product piping is double-walled and pressurized. Overfill prevention is provided by fill tube shut off-valves for all tanks. The system is monitored as follows: - Tank interstitial: VR-303 - Sump sensors: VR-208 (87, 91, B20) and VR-323 (E85) - LLDs: VR-PLLD - Vacuum sensors

routine UST inspection. Met with store manager Almaz Belanah of G&M Oil and Henry Aguirre of Tank Tek. Henry Aguirre conducted the tank testing, monitor system certification, and spill bucket testing. Mr. Aguirre s ICC and Veeder-Root certifications were observed and verified. The facility contains (4) 10,000 gallon single-walled USTs (87, 89, 91, and Diesel) monitored by a Veeder-Root TLS-350 system. The monitoring panel read "all functions normal". Alarm history and set-up tape was reviewed during this inspection. The USTs use a flapper valve for the overfill protection. No audio or visual alarms are present at the facility. The following tested and PASSED: - The STP Sump and UDC sensors (VR-208) initiated positive shutdown to the turbines when tested in water. - The fill sump sensors (VR-208) set off an alarm on the Veeder-Root panel (not programmed to shut down turbines). - Fail [Truncated]

Eval Notes:

Erdman Received an email from FR construction. The contractor stated the following: 1) Since the 89 tank will become the slave 87, all (5) dispensers will have (2) 87 product lines going into the udc's. Yes, those (2) 87 lines will be manifolded in the udc using the easy fit fittings and flex hoses. So , there will be only (2) shear valves in the 3+0's and (3) shear valves in the 3+1's. 89 product will be produced by dispenser blender. 2)Leak detectors will be Veeder Root PLLD's to all tanks.

On site to conduct a routine hazardous waste inspection. Met with store manager Almaz Belanah, who gave consent to enter and inspect the facility. Hazardous waste observed on site include: - (1) 55-gallon drum containing Waste solids. The container was labeled and properly closed. A second 55-gallon drum (empty) was available for liquid waste. Hazardous waste manifests were available for review. Perimeter of the facility and the municipal dumpster was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The Hazardous Waste Emergency Response information was available in the HMBEP.

Eval Notes: According to the CERS database, your business remains out of compliance with the annual certification requirement and a violation is being cited. Businesses are required to annually review and certify that their information in the California Electronic Reporting System (CERS) is complete, accurate and in compliance by March 1st. Your business was notified via email on 4/28/23 that your facility was out of compliance with this requirement. Please visit <https://cers.calepa.ca.gov/> to access CERS and submit your completed HMBP forms. Failure to submit HMBEP forms is a violation of the California Health & Safety Code and California Code of Regulations. Progressive enforcement will be taken by this Agency if a submittal/certification has not been completed within 30 days of this report. If you have any questions regarding this violation, please contact your inspector, Jose (Alex) Parra Bernal at (714) 388-4192 or jbernal@ochca.com.

Eval Notes: 89 to diesel tank conversion plans require additional information. New Gilbarco dispensers may need diverter shields if the new dispenser footprint exceeds the existing UDC. Please provide piping isometric. Please provide details of leak detectors for diesel system. Line tightness test may be required.. From: Dong, Alvin Sent: Monday, September 12, 2016 8:38 AM To: Edna Galindo <ednagalindo@yahoo.com>; 'Edna Galindo' <frcon@outlook.com> Subject: g&m 114 diesel conversion questions Hi Edna , I have a few questions for the project. Will the new dispenser fit exactly over the existing UDC if not need diverters; How will the two turbines work with the existing leak detectors; How are you plumbing the three existing diesel UDCs with the 89? Let me know if you have any questions. You may resubmit your plans by email. Thanks, Alvin Dong Hazardous Waste Specialist Environmental Health Division 714 640-9358 voice 714 754 1768 fax

Eval Notes: This is an in-office inspection report to document the submittal and approval of the Application for UST Modification SR0128761. A review of the SB 989 test results for the testing conducted on 9-8-16 by Daniel Salas of Tank-Tek, indicated the 91 STP sump failed testing. The scope of work includes the following: - Repair to the 91 STP sump. - Remove and replace the piping penetration in the 91 STP sump. - Disconnect, remove and replace all the Dispensers. - Installation of Bravo conversion plates on each of the existing UDCs. Ensure the retest of the 91 STP sump is scheduled 48 hrs prior to testing. Plan SR0128761 is approved and ready for pick up. Thank you .

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site. Please contact your EDR Account Executive for more information

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

[Click Here for FRS Facility Detail Report:](#)

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violation Date: 06-20-2018
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12

Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.

Violation Notes: Returned to compliance on 01/21/2022. OBSERVATION: This facility does not have a valid EPA ID number to manage hazardous waste. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an EPA ID number. CORRECTIVE ACTION: Immediately obtain an EPA ID number through DTSC to manage hazardous waste and submit evidence to the CUPA when this is obtained.

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)

Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

Violation Notes: Returned to compliance on 05/05/2022. OBSERVATION: Uniform Hazardous Waste Manifests were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests and submit copies to the CUPA. Copies can be sent to mescobedo@ochca.com or 714-586-6185.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 05/05/2022. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of the three (3) drums containing used oil and provide documentation that the violation has been corrected. Manifests can be sent to mescobedo@ochca.com or 714-586-6185.

observed in the trash bin. According to Mr. Cansino, a waste determination had not been conducted on the blast dust. Split samples were collected of the dust in the trash bin. A sample was provided to Mr. Cansino. The sample must be taken to a state-certified lab and analyzed for TTLC of the CAM-17 metals. If STLC is needed, you must also run this test. All sandblast dust must be taken out of the trash bin, placed in a container, and labeled. This waste is presumed hazardous until testing can prove otherwise. The facility did not have an EPA ID #. An application was completed and sent to the DTSC on this date.

photographs, and conduct inspection activities. Based on this inspection, the following were observed: - All violations cited in June 2018 remain outstanding and have been elevated in degree. You have 15 days from the date of this report to correct all violations. - Facility has contacted with waste management/Veolia to remove hazardous waste (spent acetone). Based on contract situation, the hazardous waste should be hauled off soon. Observed that a waste profile was conducted by Veolia. Will await hazardous waste manifests for the pick-up. - Sand blast dust was observed in the dumpster on this date. Per Mr. Cansino, the facility is currently throwing sand blast dust in the trash. - Initial lab reports are below TTLC for CAM 17 metals. However, the trigger criteria for Chromium and nickel were reached. Therefore, STLC was [Truncated]

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Violation Date: 03-31-2016
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)

Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 09/19/2016.

Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 432684
Site Name: Mohsen Mart 3
Violation Date: 04-20-2022
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 04/11/2023. OBSERVATION: The 87, 91, and diesel tanks' overfill prevention methods have been evaluated. It has been concluded that the overfill prevention methods do not meet overfill prevention requirements as the site has more than one UST that utilize an ATG system to meet the overfill prevention requirements. MESSAGE REGARDING OVERFILL PREVENTION EQUIPMENT REQUIREMENTS Recently the SWRCB issued LG 150-3 (link below), which includes clarification on existing overfill prevention requirements related to the overfill alarm. This affects sites with more than one

percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 05/31/2023. *REPEATED VIOLATION* 1. The 87, 91, and diesel tanks overfill prevention methods have been evaluated. It has been concluded that the overfill prevention methods do not meet overfill prevention requirements as the site has more than one UST that utilize an ATG system to meet the overfill prevention requirements. 2. Owner/operator failed to maintain Overfill Prevention Equipment Inspection Form records for at least 36 months. The facility was missing the inspection results for the inspection conducted on 4/14/2021 for the audible/visual alarms.

Eval Notes: On site to conduct the annual Underground Storage Tank (UST) inspection and witness the annual monitoring system certification and spill bucket testing. Met with James Romero, service technician with Verdugo Testing. Also present was Micaela Juarez, Cashier for site. The facility has the following VPH double-walled UST with doube-walled pressurized piping - (1) 20,000 gallon (87) - (2) 12,000 gallon (91 and 87 split tank) - (3) 10,000 gallon (diesel) The system is monitored by a Veeder Root TLS-350 system. The monitor is operational for audible and visual alarms and display reads "all functions normal." Automatic tank gauges (ATGs) are used for overfill prevention in tanks. The fuel tank annulars are monitored by a 303 sensors, fill and turbine sumps are monitored by 208/304 sensors and UDCs are monitored by 208/304 sensors. The vent box has 208/304 sensors. The line leak detectors are monitored by VR PLLD. The UDC brine sensor is monitored with a 304. UDC [Truncated]

Tank operator mailing state: CA
Tankidnumber: T:3 Diesel
Tank status: Confirmed/Updated Information
Tank configuration: One in a Compartmented Unit
Tank closure date: Not reported
Tank installation date: 2/15/2015 12:00:00 AM
Tank num of compartments: 2
Tank contents: Diesel
Tank capacity gallons: 10000
Tank type: Double Wall
Tank pc construction: Fiberglass
Tank pwpiping construction: Fiberglass
Tank piping type: Pressure
Tank piping construction: Double Walled
Tank sacrificial anode: No
Tank cp impressed current: No
Tank cp shutoff: Yes
Tank alarms: No
Tank ball float: No
Tank spill bucket: Yes

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Waste Description: The Following Spent Halogenated Solvents Used In Degreasing:
Tetrachloroethylene, Trichlorethylene, Methylene Chloride,
1,1,1-Trichloroethane, Carbon Tetrachloride And Chlorinated
Fluorocarbons; All Spent Solvent Mixtures/Blends Used In Degreasing
Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of
One Or More Of The Above Halogenated Solvents Or Those Solvents Listed
In F002, F004, And F005; And Still Bottoms From The Recovery Of These
Spent Solvents And Spent Solvent Mixtures.

Site History:

Weiser Lock conducted manufacturing activities at this 46-acre Site from 1975 to 1990. Following closure of the facility, environmental investigations were conducted, and the following VOCs were identified in the shallow soil beneath the Site: tetrachloroethene (PCE); trichloroethene (TCE); 1,1-dichloroethene (DCE); cis-1,2-dichloroethene (cis1,2-DCE); 1,1,1-trichloroethane (TCA); and 1,1-dichloroethane (DCA). The VOCs in soil were associated with four areas of the Site: 1. The former steam cleaning area; 2. The former hazardous materials storage area; 3. The former TCA storage area; and 4. The former degreaser area. VOCs and 1A-dioxane were also detected in the Site's groundwater in areas 1, 2 and 4. Three water-bearing zones have been identified at the Site: 1) a shallow zone, from approximately 10 to 20 feet (ft) below ground surface (bgs); 2) an intermediate zone, from approximately 25 to 35 ft bgs; and 3) a deep zone, from approximately 50 to 70 bgs. Groundwater in the vicinity of the Site flows generally south-southeast towards the ocean. . Historic maximum concentrations of VOCs in groundwater are: PCE 130,000 micrograms per liter (g/L), TCE 11,700 g/L, 1,1,1-TCA 110,000 g/L, 1,1-DCA 38,500 g/L, cis1,2-DCE 26,000, and 1,1-DCE 45,000 g/L. Remediation Activities Remediation activities that have taken place at the Site since 1992 include: soil vapor extraction (SVE), operation of a groundwater extraction and treatment system (GETS) and multi-phase extraction (MPE) of both vapor and liquid phase VOCs. Operation of the SVE System Between 1992 and 1997, the SVE and treatment system was in operation at the Site. The system consisted of 10 extraction wells and 21 air intake wells. The SVE and air intake wells targeted the upper 10 feet of unsaturated soil. Extracted soil vapor was treated with two carbon adsorption vessels and discharged to the atmosphere. The SVE system removed approximately 1,600 pounds of VOCs in five years. The SVE system was shut down in 1997, following Board staffs formal closure of soil cleanup activities in two of the Site's four impacted areas: the former steam cleaning area and the former hazardous materials storage area. Due to the high VOC levels remaining in soil in the former TCA storage and former degreaser areas, these areas were not granted closure in 1997. The SVE and air intake wells were left in place for future use. Operation of the GETS A groundwater extraction and treatment system (GETS) has been in operation at the Site since 1996. The GETS includes seven extraction wells screened in the intermediate zone (screen intervals of 25 to 35 ft bgs or 20 to 30 ft bgs). The groundwater extraction wells are located in the former steam cleaning area, the former TCA storage area, the former degreaser area, and at the southern downgradient portion of the Site. Extracted groundwater is treated with advanced oxidation and granular activated carbon (GAC), and discharged to the storm drain in accordance with a National Pollutant Discharge Elimination System (NPDES) permit. The GETS has been operating at an extraction rate of approximately 4 to 8 gallons per minute (GPM). Operation of the MPE System The MPE program was implemented in 2006, to remove the VOC mass and reduce the flux of vapor-phase VOCs to groundwater from the former TCA storage and degreaser areas. The results of a pilot test indicated that the existing SVE wells in both the former TCA storage area and former degreaser area provided an adequate network of wells for the MPE system. Based on the significant VOC concentrations observed throughout the pilot test, a catalytic oxidizer was selected to treat extracted soil vapor at the Site, due to its ability to handle high

vac mass removal rates. Construction and installation of the system was conducted in 2006. A condensation system was installed to replace the oxidizer in November 2007, and continued operating until December 2009. The catalytic oxidizer and the condensation system were operated under a Permit to Operate issued by the South Coast Air Quality Management District (SCAQMD). Implementation of MPE technology resulted in the removal of approximately 6,460 pounds of VOCs over a three-year period. The low VOC concentrations observed in vapor samples collected in November 2009 from monitoring probes in the former TCA storage and degreaser areas indicated that the overall flux of VOCs to groundwater has been significantly reduced. Based on the decreasing trends in removal rates and total VOC concentrations in the extracted vapors, the condensation system was shut down in December 2009, coincident with the expiration of the site-specific SCAQMD permit. According to Wiser Lock's monitoring data for the Site indicate that remediation activities conducted to date have resulted in decreasing or stable VOC concentrations in groundwater in each of the three areas of concern. Data from the Site boundary wells indicate that no significant vertical or lateral migration of VOCs is occurring at the Site. Detections of 1A-dioxane appear to be localized near the extraction wells in each of the three areas of concern. Based on these results, Wiser Lock proposes to implement an in-situ treatment program to further reduce the concentrations of VOCs and 1A-dioxane in the former steam cleaning area, the former TCA storage area, and the former degreaser area to levels that would be acceptable for Site closure. In Situ Treatment Program The work plan to implement the in situ remediation program was approved on June 10, 2010. This program would include a combination of in situ chemical oxidation (ISCO) and enhanced in situ bioremediation (EISB). The oxidants selected are catalyzed hydrogen peroxide (CHP) with a sodium citrate stabilizer. For bioaugmentation emulsified vegetable oil (EVO) and bacteria culture has been selected for the electron donor and the growth enhancement agent. Implementation began in July 2010. Amendments in the three areas of concern inserted using a combination of injection wells and direct push injections. The ISCO program was conducted in August 2010 in the former steam cleaning area and degreaser area. During injections, surfacing of amendments was observed. As a result, the ISCO program was discontinued and the EISB program was implemented in September 2010 in all three areas. EISB has resulted in VOC degradation; however complete degradation may not happen. The groundwater plumes in the former steam cleaning and degreaser areas have receded to high concentration nuclei surrounding EW-1, and EW-5 and -6, respectively. The former degreaser area has the highest concentrations, currently. The RWQCB has requested (December 2, 2015) for a EISB progress report and to evaluate technical approaches to improve the VOC destruction and a work plan to complete delineation of VOCs and 1,4 Dioxane work that was presented in the report dated April 2, 2015. Vertical and lateral delineation of 1,4-dioxane need to be completed followed by feasibility studies to effectively target the high concentration of this compound in the groundwater at this Site (specially Degreaser area) . Also, the RWQCB requested for geologic cross-sections to be prepared and submitted for the Site.

Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Primary Waste: CNWTRS
Waste Type2: Not reported
Waste2: Contaminated Ground Water
Primary Waste Type: Hazardous/Influent or Solid Wastes that contain toxic, corrosive, ignitable or reactive substances and must be managed according to applicable DOHS standards.
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Aesthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many

Eval Date: 04-05-2017
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: The facility information was declined, discussed required changes with site contact. The submittal was declined at this time, on the business activities page, you have listed that you have 1320 gallons or more of petroleum based product storage in aboveground tanks 55 gallons and larger. You have also not disclosed this on your materials page, possibly indicating that you do not have 1320 gallons or more of petroleum aboveground storage. Please check this, and if you do not, then place a "no" on the business activities page under above ground storage of petroleum products over 1320 gallons. Research and resubmit within 30 days.

Eval Notes: On site to conduct a routine hazardous waste inspection. Met with Debbie Strickland of Hytron Manufacturing Inc. Consent was provided to enter and conduct inspection activities. The following was observed on this date: -- Hazardous waste generated was properly stored. The labels on the containers were not legible and need to be replaced. -- Waste manifests were available for review. -- Annual hazardous waste training has not been conducted. Please conduct training and send this agency the employee sign-in sheet in order to abate this violation. -- Perimeter of the facility was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to comply with one or more of the following requirements: 1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector. 2. Keep written procedures and records of inspections and integrity tests for at least three years. 3. Keep comparison records.

Violation Notes: Returned to compliance on 07/05/2019. OBSERVATION: The facility stated in their SPCC plan that daily inspections of tanks would be performed and logged. Observed that no logs have been kept for daily inspections. CORRECTIVE ACTION: Keep written inspection procedures, records of inspections and integrity testing, signed by appropriate supervisor/inspector, for at least 3 years. A reinspection will be conducted within 30 days.

Violation Date: 12-18-2024
Citation: 22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.
Violation Notes: Returned to compliance on 12/20/2024. OA hazardous waste tank reassessment has not been conducted for the waste oil tank system within 5 years of the previous tank system assessment (7-17-2019).

Violation Division: Orange County Environmental Health

Violation Date: 03-09-2022
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 11/16/2022. Observed the following containers stored open while not actively adding or removing hazardous waste: - Four 5-gallon buckets used to collect waste oil runoff underneath the work station platforms - Two 5-gallon buckets of used oil filters - Two 55-gallon drums of waste oily water - 850 gallon waste oil tank Additionally, 4 saturated oily absorbent socks were observed in the below ground area stored on top of the secondary containment of the waste oily water. During the inspection Mr. Benitez properly stored closed the absorbent within a 55 gallon drum and labeled the drum appropriately. Corrective Action: Keep all container closed while not actively adding or removing hazardous waste. Provide documentation (i.e. photograph) of closed containers to this agency within 30 days.

Violation Notes: storage containers, including compatibility with material stored and conditions of storage, and description of sized secondary containment capable of containing the largest single container and sufficient freeboard to contain precipitation.
Returned to compliance on 11/16/2022. Observed that the SPCC plan does not adequately discuss sized secondary containment for the two 55 gallon drums of waste oily water in the hazardous waste enclosure. Corrective Action: Adequately discuss all bulk storage containers and a description of the sized secondary containment being used which should be capable of containing the contents of the largest single container. Amend the SPCC Plan. Provide documentation (i.e. amended SPCC Plan) to this agency within 30 days.

Site Name: Jiffy Lube #1579
Violation Date: 03-09-2022
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)

Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Notes: The following material is above the reporting threshold and is not currently disclosed in CERS: - Waste crushed drained used oil filters
The following disclosed material was observed in a quantity 100% greater than currently reported: - Waste oily water (4 x 55 gallons)
The following disclosed material was not observed on the service floor: - 10W-30 Conventional (1 x 55- gallons) - 5W-20 Super Synthetic (2 x 55 gallons) Corrective Action: Please verify all on site materials and add, remove or update the Hazardous Materials Inventory in CERS. Please resubmit in CERS within 30 days.

Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 395477

Violation Date: 03-12-2019
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards: 1. On a regular schedule. 2. After material repairs are made. 3. By qualified personnel. 4. The frequency and type of testing and inspections based on container size, configuration, and design.

Violation Notes: Returned to compliance on 07/05/2019. OBSERVATION: Observed that the facility checked "Not Applicable" on section "A. Onshore Facilities (excluding production) - Table G-10 General Rule Requirements for Onshore Facilities" on subsection "Outsides of bulk storage containers are frequently inspected for signs of deterioration, discharges, or accumulation of oil inside diked areas. [See Inspection Log and Schedule in Attachment 3.1] [112.8(c)(6) and 112.12(c)(6)]". This section applies to the facility as the SPCC Plan has to adequately discuss inspections and testing completed on a regular schedule. CORRECTIVE ACTION: Revise SPCC Plan and include the mentioned section. Adequately discuss facility's procedures to test and inspect aboveground/bulk storage containers in accordance with specified industry standards. This must include, but not be limited to, inspection/testing schedule/frequency, and personnel qualifications. A reinspection will be conducted within 30 days.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to comply with one or more of the following requirements: 1. Have record of inspections and tests, including integrity tests, signed by the appropriate supervisor or inspector. 2. Keep written procedures and records of inspections and tests, including integrity tests, for at least three years. 3. Keep comparison records.

Violation Notes: Returned to compliance on 11/16/2022. The facility stated in their SPCC plan that daily inspections of tanks would be performed and logged to prevent and address any spills. Mr. Benitez indicated that the large pooling of waste oil at the at the top and bottom of the tanks is due to an on going leak of a service level catch basin. Daily records did not reflect the current indication of spillage. CORRECTIVE ACTION: Keep written inspection procedures, records of accurate inspections, signed by appropriate supervisor/inspector, for at least 3 years. Please provide the daily inspection logs demonstrating accurate inspection record keeping for the months of March and April to this agency by May 5, 2022.

Eval Notes:

On site for a reinspection to follow up on the violations observed during the routine inspection conducted on 3/9/2022. The following observations were made: 1. Used oil filters were not above disclosure thresholds. Waste oily water storage was reduced to match CERS specified quantities. 10W-30 conventional and 5W-20 super synthetic oils were removed from the CERS hazardous materials inventory on 6/9/2022. Violation I169 was observed corrected. 2. 10W-30 conventional and 5W-20 super synthetic oils were removed from the site map as they are no longer stored on-site. Violation I632 was observed corrected. All violations have been corrected. No further action is required at this time. A copy of this report will be sent to environmentalaffairs@ae-jl.com; store01579@jiffylube.com; LLopez@ae-jl.com.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: Ignitable Waste

Waste Code: D005
Waste Description: Barium

Waste Code: D035
Waste Description: Methyl Ethyl Ketone

Waste Code: F003
Waste Description: The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Waste Code: F005
Waste Description: The Following Spent Nonhalogenated Solvents: Toluene, Methyl Ethyl Ketone, Carbon Disulfide, Isobutanol, Pyridine, Benzene, 2-Ethoxyethanol, And 2-Nitropropane; All Spent Solvent Mixtures/Blends Containing, Before Use, A Total Of Ten Percent Or More (By Volume) Of One Or More Of The Above Nonhalogenated Solvents Or Those Solvents Listed In F001, F002, Or F004; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.

Evacs:	No
Injuries:	No
Fatals:	No
Comments:	Not reported
Description:	RP States, during the heating process of the aromatic solvent and hydro carbon wax, the mixture caught on fire, initiating the sprinkler system to go off. This caused the mixture of aromatic solvent, hydro carbon wax and the water from the sprinkler system to spill onto the deck of the facility. Deck of the facility was bermed. Release has been secured and contained. No waterways impacted. Contractor will be conducting the cleanup.

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-02-2003
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: On January 3, 2003 under clear warm conditions, Regional Board staff conducted a routine compliance inspection of the above referenced site. Staff met with Eric Lama, the on-site environmental engineer, who produced the facility's SWPPP and training records. The SWPPP had a certification, but no signature. The plan was clearly undergoing revisions, due to the fact that sentences and sections had been added and or modified to reflect the current conditions of the site. The site had recently undergone consolidation from two separate properties. From this conversion, a large amount of liquid stock in 55-gallon drums had been stored outside. Most of these liquids were volatile/flammable materials. All contained proper cover and/or protection from storm water exposure. Trench drains spanned across the entrance and exit driveways. However, these drains were completely filled with water. Staff asked Mr. Lama about the drains. Mr. Lama

stated that the drains were merely a 2 foot by 10 foot by 10 foot deep vault with a grate covering the top. The contents of the vaults are voided periodically via shop vacs and the liquids are contained in drums and transported of site as controlled waste. Other than the spill risk associated with numerous drums of hazardous materials with no secondary containment and a substantial amount of forklift traffic, there were no storm water violations.

Emailed Ed Laird on this date to make a scheduled re-inspection. in reference to Darwins email: From: Ed Laird [mailto:elaird@coatingsresource.com] Sent: Monday, May 04, 2015 3:47 PM To: Cheng, Darwin Cc: Jeff Laird; DSRK Srinivas; Daniel S. Kippen Subject: Extension of meeting on in-ground process mixing vessels Darwin, This is a follow up email regarding a extension of the 30 day notice regarding the Reinspection meeting. We request a 14 day extension from the Reinspection date of May 9, 2015. We are still trying to select a tank expert to give us direction. Our first choice is from the Bay area and is quite expensive. Two other firms are local but have not had time to meet our schedule. We need time to meet and confer. We have the Safety Data Sheets, Process Control, and the percentage formulas of the water base products we manufacture in these vessels. Thank you, Ed [Truncated]

Eval Notes: On site for a routine Recycling inspection. Met with Tom Murphy and DSRK Sirinvas of Laird Coatings. Facility recycles more than 100 KG/month (or about 220 lbs or 27 gallons) of excluded or exempted recyclable material at the same location at which the material was generated. Facility reclaims acetone through a distiller. The distiller extracts sludge from the used solvent and separates the clean solvent. The clean solvent is reused to clean mixing vats. Facility has not submitted Recycler Report Form on CERS. Please do so immediately. Recycling log available for review.

Eval Notes:

On site on March 7, 2014 to conduct interviews to follow up on the emergency response incident involving Epoxy and a Catalyst reaction that happened on Wednesday 3/5/2014. Consent to enter and photograph was granted by business owner Ed Laird. Ed Laird explained to me that the incident happened because there were a series of mistakes made by the manufacturer of the product and his company. First, the manufacturer of the product shipped the wrong raw material (DABCO 33LV Catalyst) to this facility as suppose to the right raw material (EPODIL 746 Diluent). Then, Laird's employees did not double check whether the right chemicals were received and labeled the wrong raw material (DABCO 33LV Catalyst) with their internal bar code assuming the right raw material was received. Finally, the wrong raw material was mixed with the epoxy resin which created smoke and heat and caused the hazmat incident. Ed Laird also allowed me to speak with the employee who did the mixing of [Truncated]

Eval Notes: This agency received the state Water Resource control Board letter. Process blending vessels: Indicating in conclusion: The State Water Board has determined that the two Process Blending Vessels are Underground Storage Tanks as defined by the Health and Safety Code, section 25287, subdivision (y)(1) because they are tanks substantially or totally beneath the surface of the ground used for the storage of hazardous substances. Further, the State Water Board has determined that there are no applicable exemptions or exclusions from the California UST statutes or regulations that apply to these two USTs. Therefore, the two Process Blending Vessels are USTs and are subject to applicable California UST statutes and Regulations.

Eval Notes: Reviewing UST documentation and correspondence from Laird Coatings. On 1/17/2019, Laird Coatings submitted UST modification plans proposing to visually monitor the two underground storage tanks at the facility. The UST modification plans were a result of the State Water Resources Control Board (SWRCB) letter dated 10/3/2018 that stated that Laird was to either remove the tanks or visually monitor the tanks moving forward. After a modification and addendum to the original plans, they were accepted on 4/2/2019. On 6/26/2019, I was on site to conduct a routine hazardous waste inspection. While on site, the facility informed me that the USTs had been removed from the ground and placed aboveground for continued use at the facility. Currently, the tanks continue to be used as paint mixing tanks. Per my observation, the tanks were in good working condition and no signs of rusting were observed. The void created by pulling the tanks was backfilled and concreted over to [Truncated]

a certification, but no signature. The plan was clearly undergoing revisions, due to the fact that sentences and sections had been added and or modified to reflect the current conditions of the site. The site had recently undergone consolidation from two separate properties. From this conversion, a large amount of liquid stock in 55-gallon drums had been stored outside. Most of these liquids were volatile/flammable materials. All contained proper cover and/or protection from storm water exposure. Trench drains spanned across the entrance and exit driveways. However, these drains were completely filled with water. Staff asked Mr. Lama about the drains. Mr. Lama stated that the drains were merely a 2 foot by 10 foot by 10 foot deep vault with a grate covering the top. The contents of the vaults are voided periodically via shop vacs and the liquids are contained in drums and transported off site as controlled waste. Other than the spill risk associated with numerous drums of hazardous materials with no secondary containment and a substantial amount of forklift traffic, there were no storm water violations.

Eval Notes:	On site on March 7, 2014 to conduct interviews to follow up on the emergency response incident involving Epoxy and a Catalyst reaction that happened on Wednesday 3/5/2014. Consent to enter and photograph was granted by business owner Ed Laird. Ed Laird explained to me that the incident happened because there were a series of mistakes made by the manufacturer of the product and his company. First, the manufacturer of the product shipped the wrong raw material (DABCO 33LV Catalyst) to this facility as suppose to the right raw material (EPODIL 746 Diluent). Then, Laird's employees did not double check whether the right chemicals were received and labeled the wrong raw material (DABCO 33LV Catalyst) with their internal bar code assuming the right raw material was received. Finally, the wrong raw material was mixed with the epoxy resin which created smoke and heat and caused the hazmat incident. Ed Laird also allowed me to speak with the employee who did the mixing of [Truncated]

Eval Notes:	AEO: Update File and email to Daniel Kippen in regards to Order. Changed some due dates and added a paragraph. Email details that no more Draft Orders will be sent and OC CUPA will move to a Unilateral Order if no signature is received. EMAIL: Good Morning Mr. Kippen, See attached updated Draft Order. I have updated the dates for plan submission and completion of the project (May 31, and December 31, 2017 respectively). This Enforcement/Consent Order shows that the money to be spent by Laird will satisfy the Supplemental Environmental Project (SEP) that is put forth in section 10.3.1. As far as delaying , the process has begun and management would like to reach an agreement by the end of next week. If there is no signature or agreement from Laird, then we will move a Unilateral Order, which is official and only requires a CUPA signature (Will include exhibits and other forms). The DRAFT Order allows us to work with Laird in regards to dates and any verbiage [Truncated]

Eval Notes: AEO: Discuss case with OCEH/Lane and HCA/Fennessey. Discuss Order and process and the status and the recent emails with Mr. Kippen for Ed Laird. Update Files and draft and send email to Mr. Laird and Mr. Kippen (bcc to Cheng, Sanchez, Fennessey, Frias, Lane): EMAIL: Good Morning Mr. Laird and Mr. Kippen, I am reaching out to you to reiterate the terms of DRAFT Order and Supplemental Environmental Project (SEP) as described in section 11.3.1. At this time it states that \$50,000 shall be used as a SEP to complete the UST modifications. When complete, it is stated in Section 11.1, that the difference of \$25,000 of the assessed \$75,000 penalty will be waived and forgiven. I understand that there is a bid that Laird has received that is less than \$50,000.00. Whatever this bid is, I will update the Draft Order to reflect that bid as the minimum for the SEP. 11.1 will also be revised to reflect that the difference between the new bid and \$75,000. The difference will [Truncated]

Eval Notes:	On site with supervisor Darwin Cheng for a follow inspection. Related to CO0053939 During inspection it was discussed with Ed Laird and DSRK that HMBP is not complete and requires updating. Ed indicated that the 55 gallon drum that was wrongly received and caused the reaction in the mixer will be sent back to Air Products Co. The mixer in which the reaction occurred was labeled by DSRK on this date as "Hazardous Waste". Manifest will be sent to this agency.

Eval Notes: Reviewing UST documentation and correspondence from Laird Coatings. On 1/17/2019, Laird Coatings submitted UST modification plans proposing to visually monitor the two underground storage tanks at the facility. The UST modification plans were a result of the State Water Resources Control Board (SWRCB) letter dated 10/3/2018 that stated that Laird was to either remove the tanks or visually monitor the tanks moving forward. After a modification and addendum to the original plans, they were accepted on 4/2/2019. On 6/26/2019, I was on site to conduct a routine hazardous waste inspection. While on site, the facility informed me that the USTs had been removed from the ground and placed aboveground for continued use at the facility. Currently, the tanks

Eval Notes:	On site to conduct a routine RCRA LQG Hazardous Waste Inspection. Met with Tom Murphy and DSRK Srinivas of Laird Coating. Consent was provided to enter, take photographs (if needed), and conduct inspection activities. The following were observed: - Hazardous waste is generated during the clean-out of mixing tanks and other smaller containers. - Hazardous waste containers were properly labeled. Liquid containers utilizing a metal funnel were not adequately stored closed. This violation was corrected on site. - Employee training is conducted annually. Training was conducted in April 2019. - The contingency plan is available on CERS - Weekly inspection logs were observed - SB-14 and biennial reports were current for the 2018 and 2019 reporting year, respectively. - Hazardous waste manifests were available for review The facility is in compliance.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-02-2003
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes:

On January 3, 2003 under clear warm conditions, Regional Board staff conducted a routine compliance inspection of the above referenced site. Staff met with Eric Lama, the on-site environmental engineer, who produced the facility's SWPPP and training records. The SWPPP had a certification, but no signature. The plan was clearly undergoing revisions, due to the fact that sentences and sections had been added and or modified to reflect the current conditions of the site. The site had recently undergone consolidation from two separate properties. From this conversion, a large amount of liquid stock in 55-gallon drums had been stored outside. Most of these liquids were volatile/flammable materials. All contained proper cover and/or protection from storm water exposure. Trench drains spanned across the entrance and exit driveways. However, these drains were completely filled with water. Staff asked Mr. Lama about the drains. Mr. Lama stated that the drains were merely a 2 foot by 10 foot by 10 foot deep vault with a grate covering the top. The contents of the vaults are voided periodically via shop vacs and the liquids are contained in drums and transported off site as controlled waste. Other than the spill risk associated with numerous drums of hazardous materials with no secondary containment and a substantial amount of forklift traffic, there were no storm water violations.

Eval Notes: On site on March 7, 2014 to conduct interviews to follow up on the emergency response incident involving Epoxy and a Catalyst reaction that happened on Wednesday 3/5/2014. Consent to enter and photograph was granted by business owner Ed Laird. Ed Laird explained to me that the incident happened because there were a series of mistakes made by the manufacturer of the product and his company. First, the manufacturer of the product shipped the wrong raw material (DABCO 33LV Catalyst) to this facility as suppose to the right raw material (EPODIL 746 Diluent). Then, Laird's employees did not double check whether the right chemicals were received and labeled the wrong raw material (DABCO 33LV Catalyst) with their internal bar code assuming the right raw material was received. Finally, the wrong raw material was mixed with the epoxy resin which created smoke and heat and caused the hazmat incident. Ed Laird also allowed me to speak with the employee who did the mixing of [Truncated]

Eval Notes: This agency received the state Water Resource control Board letter. Process blending vessels: Indicating in conclusion: The State Water Board has determined that the two Process Blending Vessels are Underground Storage Tanks as defined by the Health and Safety Code, section 25287, subdivision (y)(1) because they are tanks substantially or totally beneath the surface of the ground used for the storage of hazardous substances. Further, the State water Board has determined that there are no applicable exemptions or exclusions from the California UST statutes or regulations that apply to these two USTs. Therefore, the two Process Blending Vessels are USTs and are subject to applicable California UST statutes and Regulations.

Laird, Thank you for contacting Gerrit with your concerns regarding the Draft Consent Order. I would like to address the issues outlined in your email and clarify the expectations of the Orange County Health Care Agency (OCHCA), Environmental Health Division. 1. The State Water Resources Control Board has determined that your mixing vessels fit the definition of an Underground Storage Tank (UST) because the tanks are substantially beneath the surface of the ground, [Truncated]

Eval Notes:	Darwin Cheng received a phone call from Dwayne Zieger of Reynold's Group regarding the AEO. Cheng explained to Dwayne that this CUPA was required by the State to follow a progressive enforcement plan for compliance. Cheng also explained to Dwayne that the fines or penalties are negotiable and all of the money in the AEO process will go back to Mr. Laird to help with compliance. This CUPA, via the AEO, was seeking a formal commitment and decision from Mr. Laird to move the project towards compliance. Dwayne understood and would rely the information to Mr. Laird.

Eval Type: Other, not routine, done by local agency
Eval Notes: Reviewing UST documentation and correspondence from Laird Coatings. On 1/17/2019, Laird Coatings submitted UST modification plans proposing to visually monitor the two underground storage tanks at the facility. The UST modification plans were a result of the State Water Resources Control Board (SWRCB) letter dated 10/3/2018 that stated that Laird was to either remove the tanks or visually monitor the tanks moving forward. After a modification and addendum to the original plans, they were accepted on 4/2/2019. On 6/26/2019, I was on site to conduct a routine hazardous waste inspection. While on site, the facility informed me that the USTs had been removed from the ground and placed aboveground for continued use at the facility. Currently, the tanks continue to be used as paint mixing tanks. Per my observation, the tanks were in good working condition and no signs of rusting were observed. The void created by pulling the tanks was backfilled and concreted over to [Truncated]

Eval Notes: On site to conduct a routine RCRA LQG Hazardous Waste Inspection. Met with Tom Murphy and DSRK Srinivas of Laird Coating. Consent was provided to enter, take photographs (if needed), and conduct inspection activities. The following were observed: - Hazardous waste is generated during the clean-out of mixing tanks and other smaller containers. - Hazardous waste containers were properly labeled. Liquid containers utilizing a metal funnel were not adequately stored closed. This violation was corrected on site. - Employee training is conducted annually. Training was conducted in April 2019. - The contingency plan is available on CERS - Weekly inspection logs were observed - SB-14 and biennial reports were current for the 2018 and 2019 reporting year, respectively. - Hazardous waste manifests were available for review The facility is in compliance.

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 01-02-2003
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes:

On January 3, 2003 under clear warm conditions, Regional Board staff conducted a routine compliance inspection of the above referenced site. Staff met with Eric Lama, the on-site environmental engineer, who produced the facility's SWPPP and training records. The SWPPP had a certification, but no signature. The plan was clearly undergoing revisions, due to the fact that sentences and sections had been added and or modified to reflect the current conditions of the site. The site had recently undergone consolidation from two separate properties. From this conversion, a large amount of liquid stock in 55-gallon drums had been stored outside. Most of these liquids were volatile/flammable materials. All contained proper cover and/or protection from storm water exposure. Trench drains spanned across the entrance and exit driveways. However, these drains were completely filled with water. Staff asked Mr. Lama about the drains. Mr. Lama stated that the drains were merely a 2 foot by 10 foot by 10 foot deep vault with a grate covering the top. The contents of the vaults are voided periodically via shop vacs and the liquids are contained in drums and transported off site as controlled waste. Other than the spill risk associated with numerous drums of hazardous materials with no secondary containment and a substantial amount of forklift traffic, there were no storm water violations.

Eval Notes: Called DSRK on this date to make a scheduled re-inspection. Emailed Ed Laird on this date to make a scheduled re-inspection. in reference to Darwins email: From: Ed Laird [mailto:elaird@coatingsresource.com] Sent: Monday, May 04, 2015 3:47 PM To: Cheng, Darwin Cc: Jeff Laird; DSRK Srinivas; Daniel S. Kippen Subject: Extension of meeting on in-ground process mixing vessels Darwin, This is a follow up email regarding a extension of the 30 day notice regarding the Reinspection meeting. We request a 14 day extension from the Reinspection date of May 9, 2015. We are still trying to select a tank expert to give us direction. Our first choice is from the Bay area and is quite expensive. Two other firms are local but have not had time to meet our schedule. We need time to meet and confer. We have the Safety Data Sheets, Process Control, and the percentage formulas of the water base products we manufacture in these vessels. Thank you, Ed [Truncated]

was granted by business owner Ed Laird. Ed Laird explained to me that the incident happened because there were a series of mistakes made by the manufacturer of the product and his company. First, the manufacturer of the product shipped the wrong raw material (DABCO 33LV Catalyst) to this facility as suppose to the right raw material (EPODIL 746 Diluent). Then, Laird's employees did not double check whether the right chemicals were received and labeled the wrong raw material (DABCO 33LV Catalyst) with their internal bar code assuming the right raw material was received. Finally, the wrong raw material was mixed with the epoxy resin which created smoke and heat and caused the hazmat incident. Ed Laird also allowed me to speak with the employee who did the mixing of [Truncated]

Eval Notes: AEO: Update File and email to Daniel Kippen in regards to Order. Changed some due dates and added a paragraph. Email details that no more Draft Orders will be sent and OC CUPA will move to a Unilateral Order if no signature is received. EMAIL: Good Morning Mr. Kippen, See attached updated Draft Order. I have updated the dates for plan submission and completion of the project (May 31, and December 31, 2017 respectively). This Enforcement/Consent Order shows that the money to be spent by Laird will satisfy the Supplemental Environmental Project (SEP) that is put forth in section 10.3.1. As far as delaying , the process has begun and management would like to reach an agreement by the end of next week. If there is no signature or agreement from Laird, then we will move a Unilateral Order, which is official and only requires a CUPA signature (Will include exhibits and other forms). The DRAFT Order allows us to work with Laird in regards to dates and any verbiage [Truncated]

Eval Notes: On site with supervisor Darwin Cheng for a follow inspection. Related to CO0053939 During inspection it was discussed with Ed Laird and DSRK that HMBP is not complete and requires updating. Ed indicated that the 55 gallon drum that was wrongly received and caused the reaction in the mixer will be sent back to Air Products Co. The mixer in which the reaction occurred was labeled by DSRK on this date as "Hazardous Waste". Manifest will be sent to this agency.

Eval Notes: Reviewing UST documentation and correspondence from Laird Coatings. On 1/17/2019, Laird Coatings submitted UST modification plans proposing to visually monitor the two underground storage tanks at the facility. The UST modification plans were a result of the State Water Resources Control Board (SWRCB) letter dated 10/3/2018 that stated that Laird was to either remove the tanks or visually monitor the tanks moving forward. After a modification and addendum to the original plans, they were accepted on 4/2/2019. On 6/26/2019, I was on site to conduct a routine hazardous waste inspection. While on site, the facility informed me that the USTs had been removed from the ground and placed aboveground for continued use at the facility. Currently, the tanks continue to be used as paint mixing tanks. Per my observation, the tanks were in good working condition and no signs of rusting were observed. The void created by pulling the tanks was backfilled and concreted over to [Truncated]

Eval Notes: On site to conduct a routine RCRA LQG Hazardous Waste Inspection. Met with Tom Murphy and DSRK Srinivas of Laird Coating. Consent was provided to enter, take photographs (if needed), and conduct inspection activities. The following were observed: - Hazardous waste is generated during the clean-out of mixing tanks and other smaller containers. - Hazardous waste containers were properly labeled. Liquid containers utilizing a metal funnel were not adequately stored closed. This violation was corrected on site. - Employee training is conducted annually. Training was conducted in April 2019. - The contingency plan is available on CERS - Weekly inspection logs were observed - SB-14 and biennial reports were current for the 2018 and 2019 reporting year, respectively. - Hazardous waste manifests were available for review The facility is in compliance.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Notes: any FTU treatment effluent or residual that was not discharged to a POTW, if applicable.
Returned to compliance on 08/28/2014. Facility has a Second Conditionally Authorized Unit of Treatment. Anodize III process tank with 17% Sulfuric Acid containing Aluminum and Copper is sent to dialysis membrane stack to reclaim the acid (which goes back to Anodize III), the rejected Acid (7%) with Aluminum and Copper is sent to treatment unit. Received the Test results dated June 11, 2014. Hard Anodized Type III Copper = 13.3 mg/l Acid Reject Copper = 16.3 mg/l It appears that he Copper tested on this date is below the reporting limit. If at any time Acid reject exceeds the reporting limit for ANY metals, this facility is required to notify for PBR. To abate this violation sent the notification form to this agency within 30 days from receipt of this report.

I just received confirmation that the our site mitigation is not involved with cleanup of this address. Hi Julio, Tomorrow January 21, 2015 is fine to come down at 9AM. I will not be here due to a scheduled appointment. I have already informed Darwin Cheng (Supervisor) that you will be coming down to review the file. When you get to the front desk ask for Darwin and he will assist you. I will pull the paper file today so that it is ready for you. Yes our office is on Dyer. The site mitigation section is in the same building, I spoke to site mitigation and they are looking to see if it is a cleanup site, but they usually only handle Underground Storage Tanks, DTSC usually does cleanup for TP facilities. material according to Susan. We did some investigation and found the source of copper. With a few changes, we were able to get below the hazardous threshold. I suggested we do analysis each month to show that we could keep the copper content below the threshold. I sent these results to Susan. Around October 2013 I received an email from Susan indicating: All violations from the 10/29/12 inspections have now been corrected in our database. We had shown our copper content was staying below the threshold from May 2103 through Oct 2014, so we stopped sending out monthly samples of the hard anodize solution for analysis until May of this year. Felix continued to test the copper content of the hard anodize solution internally to make sure we stayed below the hazardous [Truncated]

Eval Notes:	On site for a Recycling inspection with Felix de la Cruz. Susan Berg from OCHCA accompanied inspection. Facility conducts the following: 1. Recyclable material is 50:50 Acetone/MEK Blend, reclaimed by distillation then reused to clean metal parts. 2. Recyclable material is Acetone, reclaimed by distillation then reused to strip maskant from processed parts and also to clean metal parts. 3. Recyclable material is Spent Alkaline/caustic process solution. 257143.2(b)(2) reused as pH adjuster in neutralization stage of the waste water treatment system. Recycling logs available for review.

Eval Notes: Email from susan berg on 6/12/14 Just received a call back from Gary Wittman of Tiodize, who is the person Felix had me call to get approval for copies of the lab results. We discussed the lab results and the acid reclaim system. Gary indicated that we have the April 2013 test results which show copper 25.1 mg/l, just above HW threshold. I believe we do have those results. He did not have the November 2013 results, and was surprised when I told him about the 40.0 mg/l of copper. I requested a copy of those results and he said he would talk to Felix and send them to you (or me if he can't find your email address). So here is the deal, as explained by Gary: The tanks have copper bus (for conductivity) bars that are exposed. The copper from the bars gets into the solutions. They have tried to tape them or otherwise prevent the copper from getting into the solution, but it's tricky to do without getting into the way of the process. The treatment system was [Truncated]

Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Met with environmental manager Felix De La Cruz of Tiodize. Consent was provided to enter and conduct inspection activities. Hazardous waste was managed properly. Containers were observed closed and properly labeled. Waste manifests were available for review. The facility is regulated as an SQG facility. Based on manifests, the facility has (2) to (3) hazardous waste pick-ups per year. Employee training was observed for hazardous waste management, emergency procedures, and haz com activities. Perimeter of the facility was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility.

Evaluation:

Eval General Type: Compliance Evaluation Inspection

Eval Date: 01-02-2003

Violations Found: Yes

Eval Type: Industrial Storm Water Compliance Evaluation

Eval Notes: General Notes On January 2, 2003 under clear, warm conditions, Regional Board staff conducted a routine compliance inspection of the above referenced site. Staff was unable to meet with anyone at the site who knew where the facility's SWPPP information was. The individual that usually takes care of the information was out on vacation. Contact was made via telephone with Mr. Bliss Milla, the company's Quality Control Manager. Mr. Milla said that the information was in a locked office and could not be accessed until the individual with the key returned. Staff told Mr. Milla that provisions in the General Industrial Storm Water permit state that the SWPPP and other records must be on site and available to agency inspectors upon request. Staff explained to Mr. Milla that not having this information available constitutes a violation of the permit requirements and a Notice of Violation will be forthcoming. A walkthrough of the facility was conducted and noted that housekeeping efforts were well maintained. Laboratory analytical results for targeted pollutants were reviewed from the last Annual Report. These results when compared with those from previous reports showed a marked improvement in decreasing the pollutant load entering the MS4.

Eval Division: Water Boards

Eval Program: INDSTW

Eval Source: SMARTS,

Eval General Type: Compliance Evaluation Inspection

Eval Date: 03-01-2001

Violations Found: No

Eval Type: Industrial Storm Water Compliance Evaluation

Eval Notes: General Notes The contact, Mr. Felix De La Cruz was not available. Mr. Shmuckler accompanied staff around the facility. Review of the AR showed low pH (4.9) and high metals (Al, Fe, Zn), high SC and NO3-N. There were several stains of oil leak from employee cars. The facility was generally clean. There were stains near the anodizing building showing rust color and some white color. Mr. De La cruz called the next day and asked for the results of the inspection. He said that a SWPPP was available on site for review and asked if he needed to mail a copy to the office. Staff told him that that was unnecessary. Mr De La Cruz also stated that he could not identify the source of the high metals and the low pH. He said that the facility belonged to a group monitoring and that it was exempted from monitoring for 2000-01 and would resume sampling next year. Staff asked him to look into the sources of pollutants and see if they could be reduced or eliminated. He agreed to do that.

Eval Notes: Regional Board staff (staff) conducted a No Exposure Certification (NEC) inspection of the above facility on August 25, 2016. The facility had exposed industrial material and housekeeping issues. Staff attempted to meet with Mr. Felix de la Cruz, but he wasn't available to meet in person (per Mr. de la Cruz phone statement inside the facility). Staff explained to Mr. de la Cruz the issues observed during the inspection. Staff explained to Mr. de la Cruz that the issues must be corrected immediately. The facility's current condition does not meet the criteria of the NEC as defined in the Industrial General Permit (IGP). On September 02, 2016, staff emailed Mr. Tom Adams, Mr. Don Yoder and Mr. de la Cruz pictures of the issues at the site and a corrected completion date of September 09, 2016. On September 09, 2016, staff called the facility and was referred to Mr. Gary Wittman. Mr. Wittman stated that facility will correct the issues today. Mr. Terry Parks emailed staff corrected issue pictures of the facility. The facility's current conditions meet the criteria of the NEC as defined in the IGP. No further action is required.

Site ID: 410041
Site Name: OLIN ENGINEERING INC
Violation Date: 07-21-2014
Citation: HSC 6.95 25508(b) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(b)
Violation Description: Failure to review, revise, and recertify the business plan at least once every three years.
Violation Notes: Returned to compliance on 07/21/2014. Violation carried over from inspection on 03/24/2014
Violation Division: Orange County Environmental Health
Violation Program: HMRRP
Violation Source: CERS,

Evaluation:
Eval General Type: Other/Unknown
Eval Date: 01-27-2015
Violations Found: No
Eval Type: Other, not routine, done by local agency
Eval Notes: Esubmit accepted.

Eval Source: CERS,

Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-06-2014
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct an annual routine Hazardous Waste Inspection. Met with David Swain who explained the process, escorted me through the site and gave consent to enter/inspect. Facility contains: used hydraulic fluid from pumps plastic drums are located outside and inside shop. Hazardous waste containers are properly labeled and covered. All containers storing hazardous waste must be labeled with the following information: 1. The words HAZARDOUS Waste 2. Waste (name) 3. Hazardous property of the waste (e.g. toxic, flammable, corrosive, etc.) 4. Physical state of the waste (liquid or solid) 5. Name and address of the business. 6. Accumulation date (date the first drop of waste has been placed in container) Documents Available for review: 1. Hazardous waste Manifest/Receipts (keep a copy on site for

Eval Date: 12-14-2020
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: On site to conduct a routine hazardous waste inspection. Met with manager Israel Eaton of Olin Engineeringl. Consent was provided to enter and conduct inspection activities. The following was observed on this date: -- Hazardous waste generated was properly stored and labeled. -- Waste manifests for all waste streams were available for review. -- Perimeter of the facility was inspected. Did not observe any indication of a hazardous waste release or illegal dumping along the perimeter of the facility. The facility is in compliance.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Site ID: 22549
Site Name: United 5666
Violation Date: 07-29-2021
Citation: 23 CCR 16 2632(c)(2)(A)&(B) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632(c)(2)(A)&(B)
Violation Description: Failure to continuously monitor the interstitial space of a double-walled tank with an audible and visual alarm system.
Violation Notes: Returned to compliance on 07/29/2021. The 87 tank annular sensor failed to activate an audible and visual alarm when tested and, therefore, the tank is not monitored. The interstitial space shall be monitored with a monitoring system connected to an audible and visual alarm system. The float was observed to be missing from the VR 420 annular sensor. No liquid was observed in the tank interstitial space this date. CORRECTIVE ACTION: The certified technician replaced the sensor with a like for like sensor, VR 420, retested, and the sensor detected the leak and activated an audible/visual alarm. The violation was corrected on-site.

Violation Description:	Failure to have an approved UST Monitoring Plan.
Violation Notes:	Returned to compliance on 07/19/2019. OBSERVATION: Please make the following corrections to the facility's CERS submittal for the following sections: 1. Tank Information section for Tank #1 (Diesel): a. Under "Tank Description", the "Tank Manufacturer", as stated by the technician, is Xerxes. b. Under "Vent, Vapor Recovery (VR) and Riser / Fill Pipe Piping Construction", the "Vent Piping Transition Sumps" is None, as observed on-site. 2. Monitoring Plan section for Tank #1 (Diesel): a. Under "Dispenser Containment (UDC) Monitoring", the "UDC Panel Manufacturer" and the "UDC Panel Model #" should be blank. 3. Tank Information section for Tank #2 (Premium): a. Under "Tank Description", the "Tank Manufacturer", as stated by the technician, is Joor. b. Under "Vent, Vapor Recovery (VR) and Riser / Fill Pipe Piping Construction", i. the "Vent Piping Transition Sumps" is None and ii. the "Vapor Recovery Secondary Containment" is None, as observed on-site. 4. Monitoring Plan section for Tank #2 [Truncated]

Violation Description:	For designated operator (DO) monthly inspections conducted before October 1, 2018, failure to comply with one or more of the following requirements: Be performed by an ICC certified DO. Inspect monthly alarm history report, check that alarms are documented and responded to appropriately, and attach a copy. Inspect for the presence of liquid/debris in spill containers. Inspect for the presence of liquid/debris in under dispenser containment (UDC) and ensure that the monitoring equipment is positioned correctly. Inspect for liquid or debris in containment sumps where an alarm occurred with no service visit. Check that all testing and maintenance has been completed and documented. Verify that all facility employees have been trained in accordance with 23 CCR 2715(c). For designated operator (DO) 30 day inspections conducted on and after October 1, 2018, failure to conduct the designated UST operator visual inspection at least once every 30 days.
Violation Notes:	Returned to compliance on 07/22/2019. 1. Monthly DO visual inspections were observed to have been conducted every month but the Designated Operator failed to perform the inspections within 30 days of each other for the following months: November 2018, January 2019, February 2019. CORRECTIVE ACTION: Since February 2019 the DO is conducting DO visual inspections within 30 days from the previously conducted DO inspection. The violation was corrected/abated. 2. Observed the owner/operator did not sign the DO Visual Inspection Report for the following months: -May 31, 2109 and June 30, 2019. CORRECTIVE ACTION: Please sign the next monthly DO Visual Inspection Report within 48 hours after the report was received. Provide a copy of the next signed DO report to this agency within 30 days.

Eval Notes: The following documents were reviewed by this Agency (Received on 10/26/2021): -Overfill Prevention Equipment Inspection Report Form dated 9/15/2021. Results indicated that an OPW 71SO-4" flapper was installed and tested at the 87 tank. Results indicated the flapper activated at or before 95% of the tanks capacity. -CERS submittal submitted for CERS ID 10397347 on 10/26/2021. The Underground Storage Tank sections was not accepted as the tank manufacturer listed on CERS does not match the tank charts submitted with overfill prevention results. The following violations were observed corrected and will be abated: I101. All violations have been corrected. A copy of this inspection report will be emailed to Tom.Robins@UnitedPacific.com.

Eval Notes: On site for a routine non-RCRA SQG hazardous waste inspection. Adan Gonzalez, the manager, was present for the inspection. The following hazardous waste streams were observed: Non-RCRA Hazardous Waste Liquid (water contaminated with fuel) - 55 gallon drum Non-RCRA Hazardous Waste Solid (filters, hoses, nozzles, and absorbent) - 55 gallon drum Operator stated that no hazardous waste releases have occurred and that hazardous waste storage area inspections are conducted at least on a weekly basis. Walked the interior and exterior of the facility to inspect the hazardous waste storage area and trash dumpster. Hazardous wastes are stored in containers that are in good condition. The containers were observed to not be properly labeled or closed (refer to violation). No hazardous waste was observed in the dumpster. Hazardous Waste Emergency Response information was posted. Employees are reported to be trained. Manifest were not available to be [Truncated]

Eval Notes: On site for routine UST inspection and monitoring system certification and spill bucket testing. Site contact is Avinash Verma, Clerk. The facility has two double-walled tanks (one 20,000-gallon unleaded (87) tank and one 12,000-gallon supreme (91)) and one single-walled tank (one 10,000-gallon diesel tank). The tanks are monitored by a Veeder Root TLS-350 system. The monitor is operational for audible and visual alarms. The panel display reads all functions normal. Flapper valves are used for overfill prevention in tanks. The sensors in the fuel tank annulars (420 s), piping and turbine sumps (208 s) all shut down the turbines when submerged in liquid. The UDCs are monitored by Bravo boxes. The float/chain mechanisms tripped the shear valves when liquid was introduced into the float housing for all dispensers. The mechanical line leak detectors were tested with a simulated 3 gph leak and were determined to be operational. Spill buckets were visually tested for 60 [Truncated]

CA BOND EXP. PLAN:

Reponsible Party: FEDERAL FACILITY SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: DHS will either enter into a three way interagency agreement with EPA and DOD or will issue an order to DOD for oversight/monitoring of DOD's cleanup efforts. DHS has budgeted \$100,000 for its oversight and monitoring efforts. DHS will recover all direct costs plus staff and overhead related to the project. DOD will pay for all investigation and remedial action activities. The site is a candidate for listing on the NPL. If the site is proposed or listed on the NPL, federal funding may be available for DHS's oversight/monitoring costs.
Site Description: Seal Beach Naval Weapons Station is a weapons and ammunition storage, disbursing, and reconditioning base for the United States Navy. An initial assessment study (IAS) by the Navy concluded that the facility has nine

Hazardous Waste Desc: contaminated areas as a result of past hazardous waste handling and disposal practices. These nine sites include settling and evaporating ponds, two areas contaminated with waste oils, an open area burning ground, a salt marsh, a landfill, a solvent disposal pit and a low lying drainage lot.

Threat To Public Health & Env: The contaminants found at the nine sites identified in the initial assessment study include; heavy metals, organic acids, chlorinated hydrocarbons, polynuclear aromatic hydrocarbons (PNAs), volatile organics (VOCs), polychlorinated biphenyls (PCBs) and pesticides.

Site Activity Status: Surface water from the site drains by ditches, ponds and tidal sloughs into a salt marsh. The sediments in the salt marsh are contaminated by lead and phenols from crude oil. These substances pose a threat to aquatic life. There are also five species of birds listed as endangered by federal or State agencies that are known to inhabit these wetlands. There is also a threat of human exposure through direct contact with hazardous substances in the identified contaminant areas.

The U.S. Navy has completed its IAS to identify areas contaminated by hazardous substances. The Department of Defense (DOD) and EPA are negotiating an agreement in which DOD will conduct remedial activities under EPA oversight. This agreement is expected to be finalized by winter 1989. DHS will monitor remedial activities conducted by DOD.
