Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Evaluation:

Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-23-2012
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation

Eval Notes: Weather: overcast and warm. SWPPP is undated. Sample taken on 10/19/2011 shows SC of 550 micromhos/cm. Storm drain inlets need to be restenciled. Several drains direct runoff to the sewer. SWPPP needs to be updated to show new drains and their destination. Site has an enclosed but still exposed compressor leaking oil onto the ground with poor enclosure housekeeping. Another compressor found plumbed to discharge blow-down onto the ground. Misc. weathered trash found among items stored outside and several abandoned partial containers found left outside of cabinets. One inlet by cell towers has a hole in its filter fabric. Buses observed with chronic leaks. Electronic waste found stored outside uncovered; may need to add metals to sampling parameters.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.

Violation Notes: Returned to compliance on 08/08/2024. 1) Facility conducts tumbling and deburring operations in which waste water from four separate machines is sent to a 650 gallon holding tank where it is then sent through the CETCO machine and flocculent is added to remove metals. The metal sludge is sent through a filter press where it is then hauled as hazardous waste. The waste waters are then rendered non-hazardous and discharged to the sewer. A waste determination has not been made at the points of generation for the wastes being treated in order to determine treatment tier. 2) Facility has a baghouse dust collector in which a waste determination has not been made. Per Jose Robles, the 55-gallon drum of baghouse dust has not yet needed to be disposed. Since the baghouse dust is currently in process, testing is not required until it is considered a waste.

Consent to enter, inspect, and take photographs was granted by Tony DeGiglio, EHS Coordinator, and Jose Robles, Facility Manager. Also present was Lisa Wales, Supervising Hazardous Materials Specialist of OCHCA. Facility no longer utilizes an evaporator unit for treatment of hazardous waste and instead, utilizes a CETCO unit used to treat tumbling and deburring waste waters in which a flocculent is added to remove metals from the water and render it non-hazardous. Treated water is then discharged to POTW. Testing was requested by this Agency to determine if the treated waste is hazardous and, if so, the appropriate treatment tier. This facility will be removed from the Tiered Permitting program due to removal of the evaporator unit. Further regulation under the Tiered Permitting program is dependent upon CETCO treatment unit test results.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Consent was provided to enter and conduct a walk-through of the facility. On this date, I explained the decision made by the Department of Toxic Substances and Control (DTSC) regarding the generation, use, and management of rinsewaters and containers that contain Nicotine. The DTSC has determined that any containers or rinse water that contains any concentration (%) of Nicotine must be managed as a Federal P-Listed hazardous waste, specifically P075. Due to the volume of P-listed rinsewaters, you are a Large Quantity Generator (LQG). In addition, due to the rinsing of containers that once held Nicotine, you are subject to the Conditionally Exempt Specified Wastestream Tiered Permit. percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 09/14/2021. Owner/Operator failed to meet one of the requirements applicable to overfill prevention equipment for the 87 tank. The 87 tank failed the audible/visual alarm overfill prevention inspection as it activated above 90%, at 91%. The 87 monitoring plan specifies that the 87 uses audible/visual alarms combined with a ball float. The Audible/visual alarm must activate at or below 90% and the ball float must activate at or below 95%.

Violation Division: CORRECTIVE ACTION: Retest, repair, or replace the audible/visual alarm for the 87 tank. Verify the audio/visual alarm activate at or below 90%. Notify this Agency at least 48 hours prior to testing. Provide proof of compliance to this Agency by email or mail within 30 days.
