STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

PRELIMINARY EXECUTIVE SUMMARY

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/27/2025 has revealed that there is 1 SEMS-ARCHIVE site within approximately 1 mile of the target property.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The FINDS: database may contain additional details for this site.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. Site History: USTs were encountered during mass grading activities of the site by the grading contractor (Earth Construction and Mining) in February 2006. The site developer, Makallon Atlanta Huntington Beach, LLC, requested Hazard Management Consulting, Inc. (HMC) to provide environmental sampling and documentation for the removal of the USTs. On February 6, 2006 during trimming of the slope along PCH approximately 290-feet from the intersection of PCH and First Street three USTs were discovered. Grading immediately ceased in the area and Chevron Land and Development (CL&D) consultants Blasland, Bouck & Lee, Inc. (BBL) notified the Huntington Beach Fire Department (HBFD). All three USTs appeared to be the same size (8-feet long by 3.5-feet in diameter) and constructed of single wall metal. When the first of the USTs, which was filled with sand, was encountered it was accidentally torn open and dislodged by the grading equipment. The UST and fill sand were temporarily stockpiled approximately two hundred feet to the southeast of where it was encountered. The City Fire Department prepared the closure. Regional Board staff concurred with closure. No copy of the closure was submitted as final to the waterboard.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CEDRI is a web application used by EPA programs and various stakeholders to manage environmental data transmitted to EPA in order

Quarterly Update: Facility Description / History: Southern California Edison facilities are located in Los Angeles County. In the 1980s, the facilities generated and then stored hazardous waste in two surface impoundments. Permitting Regulatory Description / History: Southern California Edison facilities applied for a RCRA Permit. However, DTSC did not issue the facilities a permit and were exempted from Hazardous Waste RCRA Permit fee requirements. The facilities were then granted an Interim Status documented on March 30, 1981. Then granted a Variance Status on January 29, 1987, valid for 180 days, allowing the facility to perform on-site treatment for their liquid hazardous waste. On February 1, 1995, a Final Judgement Pursuant to Stipulation, court order No. BC121219, was issued to close the Southern California Edison facilities: Alamitos, Cool Water, El Segundo, Etiwanda, Huntington Beach, Highgrove, Long Beach, Mandalay, Ormond Beach, Redondo Beach, and San Bernardino. The facilities had violated Hazardous Waste Laws and received cost penalties. In response to the court order, the Southern California Edison (SCE) performed the investigation and activities to close two wastewater retention basins that had operated without a permit or other form of authorization from the DTSC. The facilities were passed onto Corrective Action for closure. EPTC - Huntington Beach is still undergoing closure and is continually reporting their water quality monitoring reports as part of their closure plan.

Comments: PA Report was reviewed by Region 4 staff. Site is located N of Edison Plant & W of Ascon Landfill in Huntington Beach. No samples were analyzed by EPA. The past operations at the site were sandblasting paint etc. from parts. The soil is probably contaminated with heavy metals. The facility was closed in Feb. 1990. City of HB plans to use the site as an equipment maintenance yard. Property is fenced. Staff recommends PEARL to determine extent and amount of contamination.

Explained the following: 1This was written a few weeks ago and some of the items have been corrected, as well as some items were not included in NOV that prob should have been for example :dismantled leak detector 2Received Financial Responsibility from Ken (has been approved) 3Sensors are not to be tampered with, seems to be a history of raised sensors. (recommended periodic inspections maybe your DO could do this monthly) 4Spoke to Ken and indicated that work orders are not on site. Possible solution: alarm log can be maintained on site 5Secondary components failed components are required to be fixed within 60 days of failure. I currently have Secondary components that were tested in November that are still waiting to be fixed.

Comments: At approximately 6:25 a.m. on March 17, 2004, Oil Well No. 80, an inactive oil well located in the southeast area of the site, had an uncontrolled release sending a 40-foot geyser of crude oil into the air. The incident was the result of the build up of pressure from natural gas, the failure of a pressure release valve, and the failure of a connecting pipe due to age and pressure. It was estimated that 360 homes were impacted by the oil spray. The property owner, Cannery Hamilton Properties, LLC, responded to a Clean Water Act order issued by U.S. EPA to fund the cleanup of the well site area and the neighborhood. Several community meetings were conducted by the City of Huntington Beach to provide information and updates on the status of cleanup. Well abandonment was conducted by the California Division of Oil, Gas, and Geothermal Resources. U.S. EPA oversaw the cleanup of the oil lease site and the residential neighborhood.

Comments: At approximately 6:25 a.m. on March 17, 2004, Oil Well No. 80, an inactive oil well located in the southeast area of the site, had an uncontrolled release sending a 40-foot geyser of crude oil into the air. The incident was the result of the build up of pressure from natural gas, the failure of a pressure release valve, and the failure of a connecting pipe due to age and pressure. It was estimated that 360 homes were impacted by the oil spray. The property owner, Cannery Hamilton Properties, LLC, responded to a Clean Water Act order issued by U.S. EPA to fund the cleanup of the well site area and the neighborhood. Several community meetings were conducted by the City of Huntington Beach to provide information and updates on the status of cleanup. Well abandonment was conducted by the California Division of Oil, Gas, and Geothermal Resources. U.S. EPA oversaw the cleanup of the oil lease site and the residential neighborhood.

Antimony was not detected in the duplicate sample taken at well AW-5; therefore, the detected result was qualified as estimated. According to antimony results shown on Table 6, detection limit (DL) for the duplicate sample at well AW-5 was at 20 ug/l greatly exceeding its MCL. DTSC requests the DL for antimony be lowered than the MCL at 6 ug/l in future monitoring events to better quantify the antimony distribution in groundwater.

Description: The Ascon Landfill site is a vacant 38-acre parcel which formerly operated as a landfill from 1938 through 1984. Much of the waste disposed at the site in its early years came from oil drilling operations, including waste drilling mud, waste water brines, and other drilling wastes. Records indicate that from 1957 to 1971, chromic acid, sulfuric acid, aluminum slag, fuel oils, styrene (a form of plastic), and other wastes were also disposed on the site. These liquid and semi-liquid wastes were deposited into open lagoons and pits. From 1971 to 1984, some of the lagoons and pits were filled in or covered with solid waste materials (construction debris). The site is adjacent to residences, a community park, a high school, and an industrial area; it is approximately 0.25 miles from the beach. The site is zoned for residential use. By 2003, when the State of California and the Cooperating Parties, or Responsible Parties, entered into a Consent Order for the site clean up. Ascon had five existing "lagoons" (waste-filled depressions that collect storm water during the rainy/wet season) covering approximately 30 percent of the site and eight pits (three near the northwest corner and five near the southeast corner) that reportedly contained industrial waste. Of these pits, only Pit F remained visible (the others were buried) at the time work began on the Site. Since the 2003 Consent Order, there have been two major remedial work efforts that have changed the physical nature of the Site through removal of waste materials, grading, and installation of stormwater control features and best management practices. These include the Emergency Action (2005-2006) and the Interim Removal Measure (2010-2011). Groundwater impacts are limited to within the site boundary according to the June 2007 Groundwater Remedial Investigation Report. Groundwater Monitoring has been conducted since 2007. Long-term groundwater monitoring will be initiated as part of the remedial action. The Final Environmental Impact Report (EIR) was certified on June 18, 2015 and the Final

Remedial Action Plan (RAP) was approved on June 19, 2015. The selected remedy involves waste removal from Pit F, strengthening of materials in Lagoons 4 and 5, waste reconsolidation, and covering with an engineered cap that will have a vegetated cover. The Responsible Parties conducted Lagoon 5 solidification and oil well abandonment from July 2017 through May 2018, in preparation for RAP implementation. A public workshop was held in November 2017. The RPs obtained Conditional Use Permit and Coastal Development Permit from the City of Huntington Beach in December 2018. A public meeting/open house was held on December 13, 2018 and in January 2019, the Responsible Parties began implementation of the full-scale remedy described in the RAP. At both a May 15, 2019 City meeting and a June 6, 2019, DTSC public meeting, community members voiced ongoing concerns about strong nuisance odors, including physical symptoms among local residents, resulting from the remediation work. On June 6, 2019, the South Coast Air Quality Management District (SCAQMD) issued a Notice of Violation to the site due to nuisance odors and DTSC suspended the remediation implementation work until additional monitoring and odor mitigation measures are implemented. During the pause in remediation, an Emergency Action excavation was completed in 2020 at the Site's northwest berm to address slope stability concerns. Additionally, DTSC allowed for the Pit F remediation work to proceed in accordance with the Revised Remedial Design Report and Revised Remedial Implementation Plan, because that component of the remedy was to be completed within a negative pressure enclosure, considered to provide the highest practicable level of odor mitigation. The excavation and removal of Pit F waste was completed in August 2021. As part of the DTSC-required, additional monitoring and odor mitigation measures to be completed prior to the restart of full-scale remediation, two separate odor mitigation approaches were pilot tested on Site from summer to fall 2024. The pilot testing involved limited and highly controlled excavations during which data was collected to evaluate and optimize odor management methods during excavation. The pilot test findings will be used to develop a restart workplan. Full-scale site remediation will not resume until DTSC has approved this restart work plan.

Background Info:	The Ascon Landfill site is a vacant 38-acre parcel which formerly operated as a landfill from 1938 through 1984. Much of the waste disposed at the site in its early years came from oil drilling operations, including waste drilling muds, waste water brines, and other drilling wastes. Records indicate that from 1957 to 1971, chromic acid, sulfuric acid, aluminum slag, fuel oils, styrene (a form of plastic), and other wastes were also disposed on the site. These liquid and semi-liquid wastes were deposited into open lagoons and pits. From 1971 to 1984, some of the lagoons and pits were filled in or covered with solid waste materials (construction debris). Hazardous substances may migrate offsite to the Huntington Beach and Talbert Channels and threaten sensitive habitats. There is also potential for wastes to migrate from the landfill and contaminate groundwater and air. The site is adjacent to residences, a community park, a high school, and an industrial area. The site is zoned as residential by the City of Huntington Beach. From 1984 to 2001, various parties made attempts to cleanup the site by performing

site investigations and removing waste material. Limited progress was made toward cleanup as two of these parties eventually filed for bankruptcy. Site investigations continued with a developer who signed a Voluntary Cleanup Agreement with DTSC in 1996. The soil/waste media (as the waste is somewhat mixed together with the soil) was considered a higher priority than groundwater due to the potential direct and indirect exposure of uncovered waste areas; thus, efforts were dedicated to completing the RI/FS for soil/ waste. In 2001, the RI/FS for soil/waste was completed and the developer decided not to continue site activities. DTSC conducted a search for potentially responsible parties related to the site. In 2003, a group of responsible parties (RPs) entered into an agreement with DTSC to investigate and cleanup the site; in addition, DTSC issued a unilateral order to other RPs to compel them to work with the aforementioned group of RPs to cleanup the site. On March 17, 2004, a pipe on Oil Well No. 80, located in the southeast area of the site, failed sending a 40-foot geyser of crude oil into the air. The incident was the result of the well sitting inactive for over 5 years, the build up of pressure from natural gas, the failure of a pressure release valve, and the failure of a connecting pipe due to age and pressure. It was estimated that 360 homes were impacted by the oil spray. U.S. EPA issued a Clean Water Act order to the well lease owner, Gregory Miral, and the land owner, Cannery Hamilton Properties, LLC (CHP). Mr. Miral failed to comply with the Order. CHP agreed to fund all mitigation costs for both the well site and the cleanup of the neighborhood. Well abandonment was conducted by the California Division of Oil, Gas, and Geothermal Resources. U.S. EPA oversaw the cleanup of the oil lease site and neighborhood. U.S. EPA is also conducting an investigation into the storage of fluids contained in two above ground storage tanks located on the oil lease site. Activities related to developing the RAP and CEQA documents for soil/waste and investigating the groundwater are on-going.

Site Description: Ascon Landfill is located on approximately 37 acres in the City of Huntington Beach at the southwest corner of the intersection of Hamilton and Magnolia Streets. Industrial and oil field operation wastes were disposed of at the site from 1938 to 1971.

Hazardous Waste Desc: Wastes were disposed in percolation/evaporation ponds that remain onsite. The wastes include: chromic and sulfuric acid industrial wastes, fuel oil, styrene tar, aluminum slag, corrosives, polyester resins, phenolic compounds, and a mix of hydrazineand nitric acid. Surface samples taken at the site indicate the

Threat To Public Health & Env: presence of petroleum distillates, toluene, trichloroethane and perchloroethylene. Inorganic compounds detected include: lead, barium, chromium, nickel and copper. Hazardous substances may migrate offsite to the Huntington Beach and Talbert Channels and threaten sensitive habitats. There is also potential for wastes to migrate from the landfill and contaminate ground water and air. Nearby residents have complained of odors. The site is located within one-half mile of residences, a community park and a high school.

Site Activity Status: Regulatory efforts are being undertaken by the Department, the South Coast Air Quality Management District, the Regional Water Quality Control Board and the City of Huntington Beach. The Department will finalize an enforceable agreement with potentially responsible parties (PRPs) in Fall, 1988. Under this agreement, the PRPs will conduct remedial activities under DHS oversight.

Completed Document Type: Site Screening
Completed Date: 02/08/1991
Comments: PA Report was reviewed by Region 4 staff. Site is located a highly
populated residential area. There is a residence covering most of the
property where the wells were abandoned Since no CERCLA regulated
wastes are known to have been on the site, staff recommends NFA by
DTSC.
