An additional 3 layers of fiberglass matt and resin were laid on the entire bottom half of the tank and all remaining seams. After repairs, vacuum was pulled on the annular space and held without loss. An ultrasound test was performed 11/26/19 and was reviewed by a professional engineer. The E-85 tank turbine sump and fill sump were filled with water and tested with the Incon unit. Witnessed the first 15-minute test passing on both sumps. The E-85 product line secondary was pressured to over 5 psi. All turbine sump sensors, tank annular sensors, and UDC sensors were tested for alarm and turbine shut down. The fill sump sensors were tested for alarm only and are not programmed for turbine shut down. The E-85 turbine sump sensor, fill sump sensor, and UDC sensor were also tested for tamper alarm. The Veeder Root was tested for sensor-out and fail-safe. Verified flapper valves on all tanks. The PLLD tests were not witnessed by this agency. Verified all technician certifications. Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Observed that the sump sensor was properly positioned at the bottom of the sump and no liquid was noted in the sump. Observed the testing of one double-walled diesel tank for the back up generators for this facility. This tank has one annular and one sump sensor connected to the Pneumacator monitoring system. Each sensor showed an audible/visual alarm when immersed in water. The overfill prevention is a flapper type droptube. The spill bucket was filled with water and visually tested for 1 hour. No leaks were observed. The monitor certification will have passing results. Please provide a copy to [Truncated]

The panel monitors a 2,000 gallon double-walled UST with suction piping to an emergency generator. The monitoring system is reported to have not been in operation since 3/25/19. The Designated Operator inspection report dated 3/20/19 indicated the Pneumercator screen was blank. Since 3/25/19 the facility has been taking manual readings of the fuel level using a dipstick and recording the levels on a log which was available for review. The UST system currently does not have a leak detection system to continuously monitor the tank and activate an audible and visual alarm. Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The facility will need to make the following revisions in CERS following notification of data transfer: Motor Oil: Since this has been indicated as a waste, please change Hazardous Material Type to waste. Change the Maximum Daily Amount so that this number reflect that max amount of waste oil held at the facility any time during the year. So if you have just one 250 gallon container, you can simply put 250 gallons for the max. If you have a 250 gallon container and a 55 gallon drum, the max would then be 305 gallons. The following violations were addressed during today s follow-up inspection. 1) Violation I006 remains open. Observed Facility Employee Training Certificate dated 1/30/2019 with the OCFA UST Facility Employee Training Record from 1/30/2019 appended. Based on the date of the training, it appears that the four employees who were trained on 1/30/2019 are from the same shift. All three shifts have not been trained. Per Jeffrey Higbee, Jon Bredehoff was working with the training officer on a long-term solution via Target Solutions. Provide documented training that covers all shifts and send the training records (designating which shifts are covered) to this Agency within 30 days. At least one of the facility employees present during operating hours shall have current training in accordance with CCR 2715(c)(1). 2) Violation I276 remains [Truncated]

Conducted a walk-thru and perimeter inspection of the facility including an observation of the trash dumpster. Observed that they currently have 1-500 gal used oil AST for oil changes on their equipment. They generate approximately 50 used drained oil filters which are recycled for metal content on site. This facility is a metal recycler. Reviewed manifests/invoices from Asbury Environmental which are properly maintained and followed up. They are aware of recycling universal wastes which are properly recycled. This company has a storm water plan with the City of SA and the clarifier on site is pumped out by Asbury once per year. A BEP is maintained on site and emergency numbers are posted. No hazardous waste violations observed this date.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Drums were provided with a lid, stored in a secure manner and appear to be in good condition. The operator completes a maintenance inspection on the drums on a weekly basis. A Hazardous Waste label was noted on all drums with the required identification. Municipal dumpster area does not appear to contain any hazardous waste. Perimeter of facility inspected - did not observe any water runoff or staining at this time. Hazardous Waste Emergency Response plan was available for review. Manifests and bills of lading for all hazardous waste streams were reviewed today. Ensure all hazardous waste manifests/disposal documents are maintained on site for at least three years from the date of transport and are available for review during normal business [Truncated]

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site. Please contact your EDR Account Executive for more information.

Quarterly Update:	Updated 11/02/07: EECO was a manufacturer of electronic components such as electronic switches, video editing equipment, mini computers, and printed circuit boards. It received an Interim Status Document (ISD) for management of hazardous waste in 1981. The regulated units were a drum storage warehouse, a concrete storage pad containing drums and a storage tank, an underground wastewater neutralization system, an aboveground wastewater neutralization system, and an underground storage tank. The site was sold to the Santa Ana school district in 1989. The site occupies approximately 10 acres. Closure activities conducted in 1995 identified VOCs that were detected in soil gas and/or groundwater at the site. The origin of the VOC release was a non-regulated outside storage area. Groundwater monitoring wells were installed according to a workplan completed in February 1996. Soil containing copper above the cleanup level was excavated from the Site between 1993 and 1996. RCRA closure certification for the regulated units was accepted by DTSC in a letter dated May 6, 1996. DTSC made its acceptance of the closure certification contingent upon implementation of the groundwater monitoring workplan activities. Beginning in July 1998, an intermediate school (grades 6, 7, 8) was constructed on the Site. A Corrective Action Consent Agreement was signed on January 23, 2004. DTSC accepted the results of a risk analysis of soil vapor and indoor air in March 2006. An RFI Workplan was approved on May 17, 2006. Pesticide sampling was conducted in 2006, and DTSC accepted the results of the risk analysis of the pesticide sampling in December 2006. Additional groundwater monitoring has been conducted from 2006 to 2007. DTSC met with the facility consultant on November 27, 2007 to discuss the most recent sampling results and determine the next course of action. Updated 8/13/08: During the November 2007 meeting, DTSC recommended that the facility begin preparation of a Corrective Measures Study (CMS). Final approval of the CMS is expected by December 2008. All previous risk assessments have shown no potential risk to the students or teachers at the school occupying the site. Updated 6/25/09: The facility submitted a draft CMS Workplan on April 27, 2009. DTSC sent comments on the workplan on June 2, 2009, requesting a response within 20 days of the date of receipt of the letter. Updated 11/12/09: The facility submitted a final Corrective Measures Study on November 4, 2009.
