Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The FINDS: database may contain additional details for this site.

Observed the Veeder-Root 208 sensor in under dispenser containment (UDC) 3/4 to not be capable of shutting down the turbine pump when dipped in water. CORRECTIVE ACTION: The technician verified programming, retested the sensor, and it was verified that the sensor was capable of shutting down the turbine pump when a leak was detected. The violation was corrected/abated on-site.

Observed the monitor certification conducted by Jeff Scranton, AW Associates, who is an ICC, VMI and Veeder Root certified technician with current certifications. He is also the Designated Operator at this facility, who will be conducting the annual employee training today. There is one active double-walled UST at this location. The other has been permanently closed. The sumps for this active tank were dry and the sensor was observed at the lowest point of the sump. The sensors were demonstrated to be operational and showed an audible/visual alarm at the Veeder Root panel. The overfill prevention, leak detector and spill buckets were demonstrated to be operational or tested and no leaks were observed. The testing will show passing results. Conducted a walk-thru and perimeter inspection of this facility including an observation of the trash dumpster which is free of hazardous waste. Observed that the waste containers (waste paint, paint filters, waste oil, waste antifreeze, used oil filters, waste fuel, waste oily absorbent, universal wastes) are properly labeled with hazardous waste labels, but three of the waste coolant containers were also labeled with universal waste labels. These universal waste labels were removed during the inspection, which correct this violation. Several of the waste containers were not stored closed. They were properly closed during the inspection, which corrected the violation. There are several florescent light tubes stored outside (not in a container, or labeled). Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Walked the facility with Juan Orozco, Plant Manager. Observed a 55 gallon drum of waste oil on a spill pallet behind the aluminum can counting machine. Asked Juan about how the waste oil is generated. Juan stated that when containers of recycled materials are received, sometimes there are containers of oil. The facility has been collecting the oil and transferring it into the 55 gallon drum. Juan was informed that the facility would need to register for a permanent state EPA ID number and manage the collected oil as hazardous waste, Department of Toxic Substances Control form 1358 was provided with this report. Education was provided on the storage requirements and accumulation time limits, a hazardous waste label was filled out during the inspection. The facility is a Very Small Quantity Generator so once 27 gallons of oil is generated the waste must be hauled within 180 days. Ensure that all manifests from waste oil pick ups are kept as record for at least 3 years.

Eval Notes: Walked the facility with Juan Orozco, Plant Manager. Observed a 55 gallon drum of waste oil on a spill pallet behind the aluminum can counting machine. Asked Juan about how the waste oil is generated. Juan stated that when containers of recycled materials are received, sometimes there are containers of oil. The facility has been collecting the oil and transferring it into the 55 gallon drum. Juan was informed that the facility would need to register for a permanent state EPA ID number and manage the collected oil as hazardous waste, Department of Toxic Substances Control form 1358 was provided with this report. Education was provided on the storage requirements and accumulation time limits, a hazardous waste label was filled out during the inspection. The facility is a Very Small Quantity Generator so once 27 gallons of oil is generated the waste must be hauled within 180 days. Ensure that all manifests from waste oil pick ups are kept as record for at least 3 years.

the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality. The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

The National Compliance Database (NCDB) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA).

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The FINDS: database may contain additional details for this site.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
