Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The FINDS: database may contain additional details for this site.

Emailed Chris to see if the recycling will be on site or off site. Jennifer, we have just discovered that the small amount of gun powder we accumulate can be recycled to be used in shotgun ammunition. This solves the issue about disposal. Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 10/29/2019. OBSERVATION: Facility has not made a waste determination to identify if the rinse from the etch process is a hazardous waste. In addition, the facility has not determined if the waste solder mask ink is a hazardous waste prior to curing it in the oven. CORRECTIVE ACTION: Obtain a representative sample of rinse water and send it to a state certified laboratory to test for CAM 17 Metals. Also, obtain a representative sample of the waste solder mask ink and have a state certified lab conduct a fish bioassay (toxicity) test. Provide both test results to this agency for review within 30 days.

Eval Notes: On site to conduct a routine hazardous waste inspection. Met with Son Pham, president of the site. Facility is a small quantity generator of etching wastes. Inspected the facility, perimeter, and the hazardous waste storage area. Inspected the municipal trash for hazardous waste. No hazardous waste was observed in the dumpster. Facility has excess (off-spec) solder mask ink that is dried before disposing of it in the municipal trash. The site needs to conduct a waste determination to determine if the ink is hazardous waste prior to letting the material dry or placing in an oven to cure. A violation for waste determination will be cited. Observed hazardous waste management practices and reviewed documentation including manifests and emergency response information. to inspect was granted by Son Pham, President. Also present was Trevor Freeman of OCHCA. Facility is a small quantity generator of printed circuit board manufacturing waste. Rinse waters from the Ferric Chloride etch process is closed loop and hauled away with the spent concentrated Ferric Chloride bath solution via manifest. Pumice dust wastewater from the polishing rinse sinks is pumped to the back storage area tanks and settles, where wastewater is then discharged to sewer on a discharge permit issued by OC Sanitation District and settled pumice dust is then hauled via manifest. Facility also dries excess solder mask ink for disposal to the municipal trash. Facility's consultant and this Agency have reviewed the facility's process and determined that the unused solder mask ink is non-hazardous per SDS and generator knowledge. Walked throughout the facility and observed hazardous waste storage areas. - No haz

Eval Notes: On site to conduct an annual routine Hazardous Waste Inspection. Met with Son who explained the process, escorted me through the site and gave consent to enter/inspect. Currently no hazardous waste stored on site. Son indicates he labels all drums with the required information once waste is generated. Etching process, Ferric chloride is stored in machine and is taken out periodically. Oxidation of circuit boards. Pumice dust is rarely generated about every 5 years it is cleaned out of the tanks. Any ink that is used is scraped cleaned from containers and containers are disposed of in the municipal trash. Electro polishing, contains Sulfuric Acid and Phosphoric acid. About every 3 years it is disposed of. Documents Available for review: 1. Hazardous waste Manifest/Receipts (keep a copy on site for three years). - Note: A copy of the federal manifest must be sent to DTSC. (Department of Toxic Substances Control, P.O. Eval Notes: Spoke with Son Pham and consultant on 10/28/19 via phone. Consultant and Son Pham stated they have made a determination, based on generator knowledge - using safety data sheets, that the unused solder mask is not hazardous waste. In addition, Son Pham and his consultant have clarified that the rinse waters from the Ferric Chloride etch process is closed loop and is hauled away with the concentrated bath solution via manifest. For this reason, violation I325 will be voided. After further review of the amount of RCRA hazardous waste generated in the last 12 months, the facility generates more than 100 kg/month of federal hazardous waste. Based on this amount, the facility needs to obtain a federal EPA ID number. Please obtain a federal EPA ID number by applying online via <https://rcrainfo.epa.gov>. Violation I352 will be cited below. A copy of this report will be sent to sonpham@soldermask.com.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the

<JNegro@ochca.com> Subject: Hazardous Waste Inspection Good Afternoon,
You recently performed an inspection at our Stater Bros. located at
7101 Warner Ave in Huntington Beach. I have reviewed the attached
inspection and have addressed any outstanding findings with Store
Management. This report states that there will be a reinspection on
9/10/15. Is this correct because it looks as if all items were
corrected on site. Regards, Steve Toscano Stater Bros. Markets

manager Ranferi Castro of Stater Bros. Consent was provided to enter
and conduct inspection activities. The following was observed on this
date: -- Hazardous waste generated was properly stored and labeled. --
Waste manifests were available for review. The last manifest available
was dated 2015. This suggests the hazardous waste at the facility is
past the accumulation date. Please schedule a hazardous waste pick-up
and send the manifest to mescobedo@ochca.com. -- Perimeter of the
facility was inspected. Did not observe any indication of a hazardous
waste release or illegal dumping along the perimeter of the facility.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 04/28/2022. Audio/Visual alarms do not specify the exact tank being overfilled, since alarm activates for both tanks and does not distinguish between the two when responding to an overfill. Facility must have overfill prevention system that alarms separately for each tank or relies on a mechanism other than A/V alarms. Change overfill prevention method and send corrected overfill test report to the agency within 60 days. Installation of flapper/fill tube shutoff valves will require a plan check with the County.

and spill bucket testing. The facility has five double walled fiberglass tanks (87, 87S, 87S, 91, Used Oil) monitored by a VR350. Positive shutdown and fail safe programming were verified. Ball float and ATG are used for overfill prevention. The site has double-walled pressurized piping with powered line leak detectors. Line leak detectors were tested and determined to be functional. The turbine, fill, and UDC sensors were tested hydrostatically. The turbine and UDC sensors shut down the turbines when submerged in fluid. Tank annulars are dry and monitored by 409 sensors (407 for used oil). Tank annulars alarmed and shut down respective turbines when submerged in liquid for all tanks. The spill buckets were visually tested for one hour and all passed. Overfill prevention tested on 01/14/21. Overfill must be tested every 36 months. Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

The FINDS: database may contain additional details for this site. Please contact your EDR Account Executive for more information

facility. Previous analytical history showed high levels of TSS (122mg/L) and COD (293mg/L). The facility SWPPP was reviewed and found that the Certification statement was not signed. The Monitoring information was up to date and BMPs adjusted as needed. Various improvements have been made since the last rainy season. A grassy swale has been constructed where a soil filled planter area once was. A street sweeper has been purchased and is used continually to remove fugitive saw dust. Extensive baghouse utilization is employed and additional structural barriers to reduce the wind's effect on moving particulate matter off site. With the implementation of these additional BMPs, the site should substantially reduce its pollutant load associated with storm water run off. Documented training specific to storm water requirements was not documented. Additional BMPs should be implemented in the forklift service area. Equipment repair was conducted in an area exposed to storm water. However, oil and grease levels shown on the analytical report were low.

Eval Type: Industrial Storm Water Compliance Evaluation
Eval Notes: On January 2, 2003 under clear, warm conditions, Regional Board staff conducted a routine compliance inspection of the above referenced facility. Previous analytical history showed high levels of TSS (122mg/L) and COD (293mg/L). The facility SWPPP was reviewed and found that the Certification statement was not signed. The Monitoring information was up to date and BMPs adjusted as needed. Various improvements have been made since the last rainy season. A grassy swale has been constructed where a soil filled planter area once was. A street sweeper has been purchased and is used continually to remove fugitive saw dust. Extensive baghouse utilization is employed and additional structural barriers to reduce the wind's effect on moving particulate matter off site. With the implementation of these additional BMPs, the site should substantially reduce its pollutant load associated with storm water run off. Documented training specific to storm water requirements was not documented. Additional BMPs should be implemented in the forklift service area. Equipment repair was conducted in an area exposed to storm water. However, oil and grease levels shown on the analytical report were low.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
