Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The FINDS: database may contain additional details for this site.

It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI). Environmental Interest/Information System:

The Used Oil Recycling System (UORS) is managed by the California Integrated Waste Management Board (CIWMB). The CIWMB helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Eval Notes: On June 6, 2002, Regional Board staff conducted a routine inspection of the above referenced facility. Staff met with the facility's Vice President, Jerry Moffatt, who produced the required documents for review. Upon review of the facility's SWPPP, it was found to be outdated and nonreflective of the current conditions at the site. Additionally, the Plan was not certified, the facility site map was outdated and the names of the facility's pollution prevention team were not listed. Training records were also produced and found to be in order and up to date. A site walk was conducted, revealing several items that were identified as out of compliance with the general industrial permit. These included: stockpiled soils along the western border of the property had no containment, spilled fuels surrounding the fueling stations and no spill kits were seen around the fuel stations. An SEL was issued on June 26, 2002 identifying the aforementioned compliance issues.

Eval Notes:	On June 6, 2002, Regional Board staff conducted a routine inspection of the above referenced facility. Staff met with the facility's Vice President, Jerry Moffatt, who produced the required documents for review. Upon review of the facility's SWPPP, it was found to be outdated and nonreflective of the current conditions at the site. Additionally, the Plan was not certified, the facility site map was outdated and the names of the facility's pollution prevention team were not listed. Training records were also produced and found to be in order and up to date. A site walk was conducted, revealing several items that were identified as out of compliance with the general industrial permit. These included: stockpiled soils along the western border of the property had no containment, spilled fuels surrounding the fueling stations and no spill kits were seen around the fuel stations. An SEL was issued on June 26, 2002 identifying the aforementioned compliance issues.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Eval Notes: Onsite to conduct a routine UST monitoring inspection. Randy Littlefield of Fleming Environmental was onsite. The following certifications were verified: ICC, VR, Incon. There is one double-walled diesel tank with a capacity of 2,000 gallons connected three back-up generators. The UST system is monitored by a Veeder-Root TLS-300C panel. The STP and fill sump are monitored using VR-208 sensors. The tank has a VR-420 sensor for annular monitoring. Check valves were observed near the generator and meet the suction piping exemption criteria. Monthly visual inspections of unburied fuel piping are complete. Overfill prevention is provided by a flapper valve in the tank's drop tube and the ATG is connected to outside annunciator. Sensors triggered audible and visual alarms. Spill buckets passed the hydrostatic test. The following documents were reviewed: Permit Monitoring Plan, Response Plan Monitoring Cert: 5/16/17, SB989: 5/20/15 DO monthly inspections, DO [Truncated]
