Eval Notes:	Received phone message from Ross Sessions regarding the tank inspection. He said "we cannot fix the tank." Canceled field start inspection at this location as the contractor will not be on site. Called Ross to discuss the tank status. He said the following: - There is a major dent in the 20K tank. The crack in the tank extends down to the bottom of the tank. - The excavation has been filled in due to water intrusion and risk of undermining the adjacent road. - Repair would require lifting the tank, therefore it will not be pursued (Note: putting a repaired tank in the ground would be considered an install, triggering VPH reqs under H&SC 25290.1(b)) . A new tank will be required. - In prepping a proposal for install/repair, Ross asked if any of the existing components may be used. It would be possible to keep the 10K existing tank, however VPH standards would apply to piping, UDC, and other components connected to the new/VPH tank. The 10K tank could use the piping, [Truncated]

Eval Notes: On site for routine underground storage tank inspection, monitoring system certification, and spill bucket testing. The facility has one double-walled tank (87-grade) monitored by a Veeder Root TLS-350 system. The monitor is operational for audible and visual alarms. Panel display reads all functions normal. Positive shutdown and fail-safe programming were verified. In-tank probes are used for overfill prevention. The sensors in the fuel tank annular, turbine sump, fill sump, and UDCs all shutdown the turbines when submerged in fuel. The mechanical leak detector was tested with a simulated 3 gph leak and were determined to be operational. The in-tank probes were positioned at 90% tank capacity, triggering an external audible/visual alarm. The spill bucket was visually tested for 30 minutes. At the end of the test period, there was no indication of leakage. Testing was conducted by John Kneisel of Petroleum Tank Testing. Tester certifications (VR, ICC, VMI) were [Truncated]

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).

The FINDS: database may contain additional details for this site.

Violation Notes:	Returned to compliance on 03/27/2023. Facility incurred a reportable release of 200 gallons of diesel fuel during the delivery that occurred on 12/16/2022. Release was discovered on 12/19/2022 by Brandon Bowers of Sunwest Engineering and reported to CalOES on this date under CalOES Control #:22-7429 by Spencer Kissick of Sunwest Engineering. Mr. Bowers observed that upon arrival, the system overfill alarm was active and the L4 diesel turbine sump sensor had been in alarm. Mr. Bowers also discovered that an estimated 126 gallons of fuel was present in the sump and had reached the soil around the tank top collar of the diesel turbine sump. The Veeder Root print out indicates that the overfill alarm was activated on 12/16/2022 at 2:51pm, 2:52pm, and 10:31pm. The L4 diesel turbine sump sensor had also gone into alarm on 12/16/2022 at 2:52pm. This Agency received notification of release from CalOES on 12/20/2022.
