Procedures

MODERATE SEDATION (Performed 9/5/2024)

Results

XR SHOULDER 2+ VIEWS LEFT - Final result (12/05/2024 10:21 AM PST)

Anatomical Region	Laterality	Modality		
Upper Extremities, Shoulder	Left	Computed Radiography		
Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			12/05/2024 11:27 AM PST	

Impressions

12/05/2024 11:28 AM PST

Healing fracture.

—

Narrative

12/05/2024 11:28 AM PST

HISTORY: Fracture follow-up.

COMPARISON: 9/5/2024.

FINDINGS: 3 views of the left shoulder is performed. Comminuted proximal humerus fracture with impaction is seen. Callus formation is seen.

—

Procedure Note

Dr. John Sohn - 12/05/2024

Formatting of this note might be different from the original.

HISTORY: Fracture follow-up.

COMPARISON: 9/5/2024.

FINDINGS: 3 views of the left shoulder is performed. Comminuted proximal humerus fracture with impaction is seen. Callus formation is seen.

IMPRESSION:

Healing fracture.

Dr. Lisa Kinney-Ham	IMG XR PROCEDURES	Final Result

XR SHOULDER 2+ VIEWS LEFT - Final result (09/05/2024 4:15 PM PDT)

Anatomical Region	Laterality	Modality		
Upper Extremities, Shoulder	Left	Computed Radiography		
Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/05/2024 4:16 PM PDT	

Impressions

09/05/2024 4:17 PM PDT

FINDINGS/IMPRESSION: A single axial view of the left shoulder shows minimal posterior subluxation of the humeral head relative to the glenoid fossa. The comminuted humeral neck fracture is unchanged.

—

Narrative

09/05/2024 4:17 PM PDT

INDICATION: post reduction

COMPARISON: 3:48 PM.

—

Procedure Note

Dr. Michael Gentry - 09/05/2024

Procedure Note

Formatting of this note might be different from the original.

INDICATION: post reduction

COMPARISON: 3:48 PM.

IMPRESSION:

FINDINGS/IMPRESSION: A single axial view of the left shoulder shows minimal posterior subluxation of the humeral head relative to the glenoid fossa. The comminuted humeral neck fracture is unchanged.

Displaced comminuted left humeral head and neck fracture with posterior dislocation of the humeral head fragment.
—

Narrative
09/02/2024 6:42 PM PDT

Narrative

LEFT SHOULDER CT WITHOUT IV CONTRAST:

INDICATION: Status post trauma with pain.
COMPARISON: None.

TECHNIQUE: Axial images, along with reconstructed coronal and sagittal images were obtained through the left shoulder without intravenous contrast.

CT Dose Report (DLP) = 1009 mGy*cm.
CTDIvol = 38 mGy.
All CT is performed utilizing one of the following dose lowering techniques: automated exposure control, adjustment of the mA and/or kV according to patient size, and the use of iterative reconstruction technique.

FINDINGS: The alignment is satisfactory at the acromioclavicular joint. There is moderately displaced comminuted right humeral head and neck fracture with posterior dislocation of the left humeral head fragment with respect to glenoid. There is superior subluxation of the left humeral head. The scapula and clavicle are intact.

LEFT SHOULDER CT WITHOUT IV CONTRAST:

INDICATION: Status post trauma with pain.
COMPARISON: None.

TECHNIQUE: Axial images, along with reconstructed coronal and sagittal images were obtained through the left shoulder without intravenous contrast.

CT Dose Report (DLP) = 1009 mGy*cm.
CTDIvol = 38 mGy.
All CT is performed utilizing one of the following dose lowering techniques: automated exposure control, adjustment of the mA and/or kV according to patient size, and the use of iterative reconstruction technique.

FINDINGS: The alignment is satisfactory at the acromioclavicular joint. There is moderately displaced comminuted right humeral head and neck fracture with posterior dislocation of the left humeral head fragment with respect to glenoid. There is superior subluxation of the left humeral head. The scapula and clavicle are intact.

IMPRESSION:
Displaced comminuted left humeral head and neck fracture with posterior dislocation of the humeral head fragment.

Comment:
Calculation based on the Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) equation refit without adjustment for race.

Estimated Glomerular Filtration Rate categories in CKD

CHRONIC KIDNEY DISEASE (CKD) STAGES		
GFR category	GFR	Terms
	(ml/min/1.73m2)	
G1	> or = 90	Normal or high
G2	60-89	Mildly decreased*
G3a	45-59	Mildly to Moderately decreased
G3b	30-44	Moderately to severely decreased
G4	15-29	Severely decreased
G5	<15	kidney failure

*Relative to young adult level

CT SHOULDER LEFT WO IV CONTRAST - Final result (09/02/2024 6:19 PM PDT)

Anatomical Region	Laterality	Modality
Upper Extremities, Shoulder	Left	Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/02/2024 6:39 PM PDT	

Impressions
09/02/2024 6:42 PM PDT
Displaced comminuted left humeral head and neck fracture with posterior dislocation of the humeral head fragment.
—

Narrative
09/02/2024 6:42 PM PDT

Narrative

LEFT SHOULDER CT WITHOUT IV CONTRAST:

INDICATION: Status post trauma with pain.
COMPARISON: None.

TECHNIQUE: Axial images, along with reconstructed coronal and sagittal images were obtained through the left shoulder without intravenous contrast.

CT Dose Report (DLP) = 1009 mGy*cm.
CTDIvol = 38 mGy.
All CT is performed utilizing one of the following dose lowering techniques: automated exposure control, adjustment of the mA and/or kV according to patient size, and the use of iterative reconstruction technique.

FINDINGS: The alignment is satisfactory at the acromioclavicular joint. There is moderately displaced comminuted right humeral head and neck fracture with posterior dislocation of the left humeral head fragment with respect to glenoid. There is superior subluxation of the left humeral head. The scapula and clavicle are intact.

-

Procedure Note

Dr. Ha Le - 09/02/2024

			09/02/2024 4:28 PM PDT	

Impressions

09/02/2024 4:31 PM PDT
Displaced left humeral head and neck comminuted fracture with probable glenohumeral dislocation.

-

Narrative

09/02/2024 4:31 PM PDT
LEFT SHOULDER:

INDICATION: Skateboarding injury with pain.
COMPARISON: None.
FINDINGS: 4 views at 1613 hours demonstrate moderately displaced left humeral head and neck comminuted fracture with probable glenohumeral dislocation. The alignment is satisfactory at the left acromioclavicular joint. The visualized upper ribs appear to be intact.

-

<u>No Risk</u>	<u>12/05/2024 9:07 AM PST</u>	<u>Nurse Yenni N</u>

Discharge Instructions - documented in this encounter

Discharge Instructions

Resident Cameron Farsar - 12/05/2024 11:52 AM PST

Formatting of this note might be different from the original.

Thank you for allowing us to provide care for you today.

At this time, it has been determined to the best of our ability that it is safe for you to be discharged home. No medical emergencies were identified on your visit today. Our focus in an emergency department evaluation is to identify and treat immediate threats to your life. Often, further evaluation will be needed to reach a definitive diagnosis and treatment plan for your condition. It is important for you to follow-up with your primary care provider for further evaluation of your current complaint as well as continued medical management for long-term health maintenance.

Log on to ARMC portal to get your test results:

1. <https://www.arrowheadregional.org>
2. Select "my ARMC health portal"
3. Select "self enrollment"
4. Fill out enrollment request and submit

WE HAVE NOT MADE A FOLLOW-UP APPOINTMENT FOR YOU, PLEASE CONTACT YOUR PRIMARY CARE PROVIDER/DOCTOR FOR AN APPOINTMENT.

Your condition, while significant, has been currently deemed appropriate for outpatient management with you primary care provider. If you were given a prescription, your prescription can be filled at our hospital pharmacy on the south side of campus or at any pharmacy of your choosing.

1. Take all medications as directed, including over-the-counter medications and any that were prescribed to you. IF YOU DID NOT RECEIVE A PAPER PRESCRIPTION, THEN YOUR PRESCRIPTIONS WERE ELECTRONICALLY TRANSMITTED TO THE PREFERRED PHARMACY YOU GAVE US.

2. Return to the ER if new or worsening symptoms, including any of the return precautions that we discussed during your visit, such as worsening or severe pain, chest pain or shortness of breath, weakness or dizziness, syncope, persistent nausea vomiting fevers or chills, any new, emergent or concerning conditions, or failure to improve.

3. Follow-up with your primary medical doctor 1-3 days.

If you need a primary care provider, call 1-855-422-8029 to establish care with the primary health clinics associated with Arrowhead regional medical center. If you are unable to establish care through this manner, call the Arrowhead Regional Medical Center Patient Advocate at 909-580-3535 for further recommendations.

If you do not understand any part of your treatment, discharge plan/instructions, or our conversation today, please inform your nurse prior to discharge.

Electronically signed by Resident Cameron Farsar at 12/05/2024 11:52 AM PST

[table#1]:
Orthopaedic History and Physical

[table#2]:
Requesting Service:	ED
Time of Consult:	8:08 AM
Time at Bedside:	8:20 AM

History of Present Illness:
Anthony Dimarcello is a right handed 41 y.o. male with chronic ongoing medical problems (PMH) of none brought in by self for evaluation and treatment of left shoulder pain. Ortho was consulted for left comminuted humeral head/neck fracture with posterior dislocation of the humeral head. DOI: 08/29/2024. Patient states that on date of injury he was skateboarding down a hill when he slipped over some soapy pavement and landed directly onto the left shoulder in an attempt to roll into the fall. Patient states that he was seen at Hoag Newport Beach and was placed in a sling and told it was a nonoperative injury. However patient wanted a second opinion and was recommended to Arrowhead Regional Medical Center. He reports persistent swelling to left upper extremity from shoulder to elbow with pain. Has not been able to range the shoulder or elbow normally since date of injury. Reports occasional tingling and numbness in certain positions. Patient is originally from Huntington Beach.

Date of onset: 8/29/24
Location: left humeral head fracture
Mechanism: skateboarding fall
Aggravating factors: Palpation, ROM
Associated symptoms: N/A

Tobacco Use

| • | Smoking status: | Never |

| • | Smokeless tobacco: | Never |

Substance Use Topics

| • | Alcohol use: | Yes |

Smoking: Vapes nicotine daily, 1 cartridge per week

Alcohol: Denies

Drugs: Marijuana 1 time per week

Living situation: Homeless, currently stays at some friends' couches

Occupation: Denies

ROS

**Bold is a change from baseline, ** all others are negative

Constitutional: fevers, chills

Eyes: visual disturbance

Ears, nose, mouth, throat, and face: hearing loss, sore throat

Respiratory: cough, wheezing

Cardiovascular: chest pain, syncope

Gastrointestinal: abdominal pain, diarrhea, nausea, vomiting

Skin: rash, skin lesions

Hematologic/lymphatic: bleeding, easy bruising

Neurological: gait problems, weakness

Endocrine: weight gain, weight loss, heat intolerance, cold intolerance

Musculoskeletal: **+ for left shoulder pain**

Physical Exam:

There were no vitals taken for this visit.

General appearance: No acute distress

CV: Warm, well perfused extremities

Pulm: Symmetric chest rise, no work of breathing, no audible wheezing.

MSK:

** **

Physical Exam

left UPPER EXTREMITY

Inspection: Ecchymosis noted on medial aspect humerus to elbow. Diffuse swelling from shoulder to elbow. No open wounds, erythema, skin abrasions. No atrophy

Palpation: TTP to shoulder over area of injury

ROM: Unable to assess shoulder or elbow range of motion due to pain. Full wrist and finger motion

Stability: Unable to assess instability to shoulder or elbow due to pain from fracture. No instability to wrist and fingers

Motor:

AIN/PIN/R/U/M intact

Unable to assess shoulder abduction, forward flexion, external rotation, and internal rotation

Unable to accurately assess elbow flexion and extension due to pain from shoulder

Intact wrist flexion and extension

Intact finger grip, finger cross, OK sign, and thumbs up

Sensation is intact in the 1st dorsal webspace, index finger, and small finger. Sensation intact to lateral aspect of shoulder

Circulation: 2+ Radial pulse, Cap refill < 2 seconds** **

Contralateral extremity for comparison, and bilatera

l lower extremities:

Inspection, palpation, ROM, stability, strength, skin exams show no evidence of acute injury.

PLAN:

-
- Pending ED bed for conscious sedation for attempted closed reduction of L shoulder.

-
Addendum @1900

DISPOSITION: DISCHARGE

- Dispo per ED

- Pain Rx per ED

- NWB left upper extremity

- Follow-up with orthopedic clinic within 1 week. Ambulatory referral to ortho clinic placed. Patient may call Referral Center at 1-855-422-8029 to follow up on referral.

- Orthopedic clinic phone: 909-580-1775

- Discussed with orthopedic team

Prompt Evaluation Instructions

If you develop any of the following, go to the nearest Emergency Department for prompt evaluation:

- New or worsening pain

- Cool, dusky or blue digits

- Decreased ability to move the affected extremity
- Feelings of pressure, grinding or numbness of the area of the fracture

****Attending Note: ****

I have reviewed the appropriate documentation and images of this patient and I agree with the assessment and plan

"Please note that this medical document was created using an electronic medical record system with dictation voice recognition software. Although this documentation has been carefully reviewed, there may still be some phonetic and typographical errors. These errors are purely typographical and due to imperfections of the software program. They do not reflect any compromise of the patient's medical care."

****Patient seen and evaluated by Alexandra Jones, EM PGY1, note reformatted by Kensley Russ, PA-C. Russ PA-C did not have direct care with this patient.****

****ADMISSION DIAGNOSIS****: No admission diagnoses are documented for this encounter.

****SUBJECTIVE****

Anthony Dimarcello is a right handed 41 y.o. male with chronic ongoing medical problems (PMH) of none brought in by self for evaluation and treatment of left shoulder pain. Ortho was consulted for left comminuted humeral head/neck fracture with posterior dislocation of the humeral head. DOI: 08/29/2024. Patient states that on date of injury he was skateboarding down a hill when he slipped over some soapy pavement and landed directly onto the left shoulder in an attempt to roll into the fall. Patient states that he was seen at Hoag Newport Beach and was placed in a sling and told it was a nonoperative injury. However patient wanted a second opinion and was recommended to Arrowhead Regional Medical Center. He reports persistent swelling to left upper extremity from shoulder to elbow with pain. Has not been able to range the shoulder or elbow normally since date of injury. Reports occasional tingling and numbness in certain positions. Patient is originally from Huntington Beach.

Patient's baseline ambulatory status: no difficulty

****OUTSIDE REPORTS REVIEWED****

none

****PAST MEDICAL HISTORY****

History reviewed. No pertinent past medical history.

****PAST SURGICAL HISTORY****

History reviewed. No pertinent surgical history.

History reviewed. No pertinent family history.

ROS

**Bold is a change from baseline, ** all others are negative

Constitutional: fevers, chills
Eyes: visual disturbance
Ears, nose, mouth, throat, and face: hearing loss, sore throat
Respiratory: cough, wheezing
Cardiovascular: chest pain, syncope
Gastrointestinal: abdominal pain, diarrhea, nausea, vomiting
Skin: rash, skin lesions
Hematologic/lymphatic: bleeding, easy bruising
Neurological: gait problems, weakness
Endocrine: weight gain, weight loss, heat intolerance, cold intolerance
Musculoskeletal: **+ for left shoulder pain**

OBJECTIVE
BP 123/84 (BP Location: Right arm, Patient Position: Sitting) | Pulse 86 | Temp 36.6 °C (97.8 °F) (Temporal) | Resp 18 | Ht 1.829 m (6') | Wt 88.3 kg (194 lb 10.7 oz) | SpO2 97% | BMI 26.40 kg/m²
General: alert, appears stated age, and cooperative
Psychiatric: alert and oriented x4
Cardiovascular: Cap refill intact to fingertips of bilateral hands
Chest: symmetrical chest rise noted, unlabored breathing
Derm: skin is intact

MUSCULOSKELETAL EXAM

Physical Exam
left UPPER EXTREMITY
Inspection: Ecchymosis noted on medial aspect humerus to elbow. Diffuse swelling from shoulder to elbow. No open wounds, erythema, skin abrasions. No atrophy
Palpation: TTP to shoulder over area of injury
ROM: Unable to assess shoulder or elbow range of motion due to pain. Full wrist and finger motion
Stability: Unable to assess instability to shoulder or elbow due to pain from fracture. No instability to wrist and fingers
Motor:
AIN/PIN/R/U/M intact
Unable to assess shoulder abduction, forward flexion, external rotation, and internal rotation
Unable to accurately assess elbow flexion and extension due to pain from shoulder
Intact wrist flexion and extension
Intact finger grip, finger cross, OK sign, and thumbs up
Sensation is intact in the 1st dorsal webspace, index finger, and small finger. Sensation intact to lateral aspect of shoulder
Circulation: 2+ Radial pulse, Cap refill < 2 seconds** **

IMAGING
Imaging personally reviewed on 09/03/24 show comminuted displaced left humeral head and neck fractures with a posterior dislocation of the humeral head fragment

Medical Decision Making

[table#12]:
ASSESSMENT:

Anthony Dimarcello is a right handed 41 y.o. male with chronic ongoing medical problems (PMH) of none brought in by self for evaluation and treatment of left shoulder pain. Ortho was consulted for left comminuted humeral head/neck fracture with posterior dislocation of the humeral head. DOI: 08/29/2024.

Other injuries:
None

[table#13]:
PLAN:

- Pending ED bed for conscious sedation for attempted closed reduction of L shoulder.

**Attending Note: **

I have reviewed the appropriate documentation and images of this patient and I agree with the assessment and plan

This medical document was created using an electronic medical record system with dictation voice recognition software. Although this documentation has been carefully reviewed, there may still be some phonetic and typographical errors. These errors are purely typographical and due to imperfections of the software program. They do not reflect any compromise of the patient's medical care.

ADMISSION DIAGNOSIS: No admission diagnoses are documented for this encounter.

SUBJECTIVE

Anthony Dimarcello is a right handed 41 y.o. male with chronic ongoing medical problems (PMH) of none brought in by self for evaluation and treatment of left shoulder pain. Ortho was consulted for left comminuted humeral head/neck fracture with posterior dislocation of the humeral head. DOI: 08/29/2024. Patient states that on date of injury he was skateboarding down a hill when he slipped over some soapy pavement and landed directly onto the left shoulder in an attempt to roll into the fall. Patient states that he was seen at Hoag Newport beach and was placed in a sling and told it was a nonoperative injury. However patient wanted a second opinion and was recommended to Arrowhead Regional Medical Center. He reports persistent swelling to left upper

extremity from shoulder to elbow with pain. Has not been able to range the shoulder or elbow normally since date of injury. Reports occasional tingling and numbness in certain positions. Patient is originally from Huntington Beach.

No L shoulder imaging when originally consulted. L shoulder XR taken at 1613. L shoulder CT taken at 1842.

Patient's baseline ambulatory status: no difficulty

ROS

**Bold is a change from baseline, ** all others are negative

Constitutional: fevers, chills
Eyes: visual disturbance
Ears, nose, mouth, throat, and face: hearing loss, sore throat
Respiratory: cough, wheezing
Cardiovascular: chest pain, syncope
Gastrointestinal: abdominal pain, diarrhea, nausea, vomiting
Skin: rash, skin lesions
Hematologic/lymphatic: bleeding, easy bruising
Neurological: gait problems, weakness
Endocrine: weight gain, weight loss, heat intolerance, cold intolerance
Musculoskeletal: **+ for left shoulder pain**

OBJECTIVE

BP 126/83 (BP Location: Right arm, Patient Position: Sitting) | Pulse 95 | Temp 37.1 °C (98.8 °F) (Oral) | Resp 16 | Wt 89 kg (196 lb 3.4 oz) | SpO2 96%
General: alert, appears stated age, and cooperative
Psychiatric: alert and oriented x4
Cardiovascular: Cap refill intact to fingertips of bilateral hands
Chest: symmetrical chest rise noted, unlabored breathing
Derm: skin is intact

MUSCULOSKELETAL EXAM

Physical Exam

left UPPER EXTREMITY

Inspection: Ecchymosis noted on medial aspect humerus to elbow. Diffuse swelling from shoulder to elbow. No open wounds, erythema, skin abrasions. No atrophy
Palpation: TTP to shoulder over area of injury
ROM: Unable to assess shoulder or elbow range of motion due to pain. Full wrist and finger motion
Stability: Unable to assess instability to shoulder or elbow due to pain from fracture. No instability to wrist and fingers
Motor:
AIN/PIN/R/U/M intact
Unable to assess shoulder abduction, forward flexion, external rotation, and internal rotation
Unable to accurately assess elbow flexion and extension due to pain from shoulder
Intact wrist flexion and extension
Intact finger grip, finger cross, OK sign, and thumbs up
Sensation is intact in the 1st dorsal webspace, index finger, and small finger. Sensation intact to lateral aspect of shoulder
Circulation: 2+ Radial pulse, Cap refill < 2 seconds** **

IMAGING

Imaging personally reviewed on 09/02/24 show comminuted displaced left humeral head and neck fractures with a posterior dislocation of the humeral head fragment

-See radiology report for full interpretation.

LABS

No results found for: "CRP"

[table#8]:

| **Procedures:** |

| --- |

None at this time, planning attempt at closed reduction of L posterior shoulder dislocation

****Medical Decision Making****

[table#9]:

[**ASSESSMENT:**]

[---]

Anthony Dimarcello is a right handed 41 y.o. male with chronic ongoing medical problems (PMH) of none brought in by self for evaluation and treatment of left shoulder pain. Ortho was consulted for left comminuted humeral head/neck fracture with posterior dislocation of the humeral head. DOI: 08/29/2024.

Other injuries:

None

[table#10]:

[**PLAN:**]

[---]

- Pending ED bed for IV pain medication administration for attempted closed reduction of L shoulder. Contacted ED and trauma nurse, no beds available.

- Pt eloped from ED prior to finding bed. ED attempted to contact pt to return to ED for further care but unable to reach him, his emergency contact, or leave a voicemail

- If patient returns, plan for closed vs open reduction

****Attending Note: ****

I have reviewed the appropriate documentation and images of this patient and I agree with the assessment and plan

This medical document was created using an electronic medical record system with dictation voice recognition software. Although this documentation has been carefully reviewed, there may still be some phonetic and typographical errors. These errors are purely typographical and due to imperfections of the software program. They do not reflect any compromise of the patient's medical care.

CT SHOULDER LEFT WO IV CONTRAST - Final result (09/02/2024 6:19 PM PDT)

Anatomical Region	Laterality	Modality
Upper Extremities, Shoulder	Left	Computed Tomography

Specimen (Source)	Anatomical Location / Laterality	Collection Method / Volume	Collection Time	Received Time
			09/02/2024 6:39 PM PDT	

Impressions

09/02/2024 6:42 PM PDT
Displaced comminuted left humeral head and neck fracture with posterior dislocation of the humeral head fragment.
—

Narrative

09/02/2024 6:42 PM PDT
LEFT SHOULDER CT WITHOUT IV CONTRAST:

INDICATION: Status post trauma with pain.
COMPARISON: None.

TECHNIQUE: Axial images, along with reconstructed coronal and sagittal images were obtained through the left shoulder without intravenous contrast.

CT Dose Report (DLP) = 1009 mGy*cm.
CTDIvol = 38 mGy.
All CT is performed utilizing one of the following dose lowering techniques: automated exposure control, adjustment of the mA and/or kV according to patient size, and the use of iterative reconstruction technique.

FINDINGS: The alignment is satisfactory at the acromioclavicular joint. There is moderately displaced comminuted right humeral head and neck fracture with posterior dislocation of the left humeral head fragment with respect to glenoid. There is superior subluxation of the left humeral head. The scapula and clavicle are intact.
—

Procedure Note
